LICENSE AGREEMENT

This software is protected by copyright law and international copyright treaty. Therefore, you must treat this software just like a book, except that you may copy it onto a computer to be used and you may make archive copies of the software for the sole purpose of backing up our software and protecting your investment from loss. The software may be moved from one computer to another, so long as there is no possibility of it being used by more than one person at a time.

ADDING USERS

You may add users by paying for a separate software package for each user you wish to add. You may also add users by purchasing a site-license, so long as the number of persons who are able to use the software at one time is not more than the number of authorized users specified in our product or license.

TRANSFERRING THE SOFTWARE

You may transfer all of your rights to use the software to another person, provided that you transfer to that person all of the software, diskettes (if applicable), and documentation provided in this product (including this statement), and transfer or destroy all copies in any form. Remember, once you transfer the software, you no longer have any right to use it, and the person to whom it is transferred may use it only in accordance with the copyright law, international treaty, and this statement.

If you transfer this product to another person, the new user have no right to use our free support service even this product under free warranty period.

If you have purchased an upgrade version of the software, it constitutes a single product with the software the you upgraded. For example, the upgrade and the software the upgraded cannot both be available for use by two different people at the same time, and cannot be transferred separately, without written permission from Glorious Technology Co., Ltd.

Except as provided in this statement, you may not transfer, rent, lease, lend, copy, modify, translate, sublicense, time-share, or electronically transmit or receive the software, media, or documentation.

LIMITED WARRANTY

1. Glorious Technology Co., Ltd. provides one-year free hot-line support from the original purchase date.
2. Glorious Technology Co., Ltd. warrants the product provided by Glorious Technology Co., Ltd. to be free of defects in materials and workmanship for a period of 60 days from the original purchase date.
3. The entire and exclusive liability and remedy for breach of this limited warranty shall be limited to replacement of defective media or documentation and shall not include or extend to any claim for or right to recover any other damages, including but not limited to, loss of profit, data, or use of the software or special, incidental or consequential damages, or other similar claims, even if Glorious Technology Co., Ltd. has been specifically advised of the possibility of such damages.
4. This warranty is invalid when the product has been damaged through misuse, negligence, accident, computer virus and natural calamities.
5. Glorious Technology Co., Ltd. is not responsible for the data which create or produce by the software.
6. Glorious Technology Co., Ltd. makes no representation or warranty that the software or documentation are "error-free", or meet any user's particular standards, requirements or needs.
7. Glorious Technology Co., Ltd. provides no warranty at all to any person, other than the Limited Warranty provided to the original purchaser of this product.
8. Installing and using this software indicate the purchaser and the users' acceptance of above terms and license agreement.
9. The invalidity or unenforceability of any provisions of this License Agreement shall not affect the remaining provisions hereof.

* GAS stands for GTC Accounting System

GIS stands for GTC Invoicing System

GOS stands for GTC Quotation and Ordering System

GRS stands for GTC Retailing System

Chapter 1 Installation

1.1 Before Installation

Before installation, please check the followings:

- a) Hardware requirements
 - Intel Pentium II 450Mhz CPU or faster
 - 64MB RAM or above
 - Hard disk space for GTC applications is about 300MB. The space for data depends on the volume of your data. 100MB HDD space for data is recommended.
 - 1024x768 resolutions
 - One USB port
- b) Operating System
 - Microsoft XP, VISTA, 7, 8.1, or 10
 - Please use Administrator authority to log in the Operating System
- c) Folders for GTC applications and Data
 - Default folder for GTC applications is c:\gtc\gbs50p (Professional Edition) or c:\gtc\gbs50i (Enhanced Edition). Normally, GTC applications should be installed in local hard disk, either single user version or network version, to enhance the performance.
 - If the data will be shared in network, the permission of data folder for Read, Write, Add and Delete should be assigned.
- d) Create a company data
 - Set up Account Period carefully when create a company data.
 - Set up some basic information for Customers, Vendors, Stocks, Payment Methods and Employee, etc.
- e) Install Firebird/Interbase Server

GTC application is a SQL database application. Firebird/Interbase server must be installed. Firebird 2.1.4.18393 (or newer version) or Interbase 2007 (or newer version) is required. Firebird/Interbase server and any databases you create or connect to must reside on a hard drive that is physically connected to the host machine. You cannot locate components of the server, or any database, on a mapped drive, a file system share or a network file system. If Firebird/Interbase is installed in another computer, following information should be collected:

 - i) Server name/Computer name or IP address: e.g. FirstServer or 192.168.1.1
 - ii) Data folder and database's file name in server: the default file name of database is GBSI.FDB. For example, C:\GTC\GBS50i\DATA\GBSI.FDB.
 - iii) Firebird/Interbase's user name and password: any tools which need to connect Firebird/Interbase's database file requires this information. The user name of administrator of Firebird/Interbase is SYSDBA and password is masterkey. For security reasons, we suggest to change the password of SYSDBA immediately.
 - iv) If Firebird 1.5 or above is installed in Linux operating system, the installer will generate a random SYSDBA password and store that in /opt/firebird/SYSDBA.password.

- v) The permission of data folder for Read, Write, Add and Delete should be assigned to the service of Firebird/Interbase.

For more information of Firebird/Interbase, please refer its user manual or the chapter of [How to install Firebird] in this manual.

Note: Firebird/Interbase both are not the product of GTC Technology Company Limited. GTC Technology Company Limited and the distributors are not responsible for any warranty and support to Firebird/Interbase. The official web site of Firebird and Interbase is <http://www.firebirdsql.org> and <http://www.interbase.com> respectively.

1.2 Execute Installation Program

Please shut down all running programs before GTC applications installed. Put GTC applications CD into your CD-ROM. Figure 1-2 is displayed.

If Installation Program can't be automatically executed, please click [Start] button to choose Run function. Type D:\SETUP (D:\ is CD-ROM) in dialog box. Of course, you can also execute SETUP.EXE in GTC applications CD by yourself.

* Please don't insert USB Software Dog into your computer before Installation Program completed.

Figure 1-1 Run in MS Windows

1.3 Installation Steps

After Installation Program being run, the interface for language selection will be displayed. Only matched with the language code of your MS Windows, the character set can be displayed correctly. Otherwise, non-readable character will happen. Please choose the correct Language:

Figure 1-2 Select Language

Click [OK] button after the desired language selected. Then, go to next step:

Figure 1-3 Welcome

Press [Next] button to read license agreement.

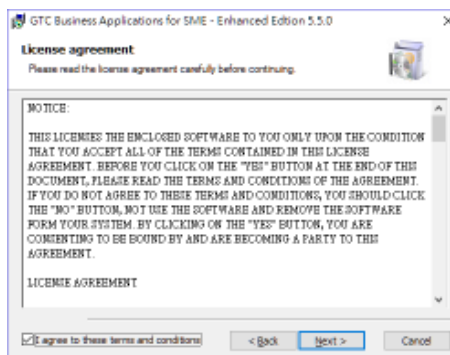

Figure 1-4 License agreement

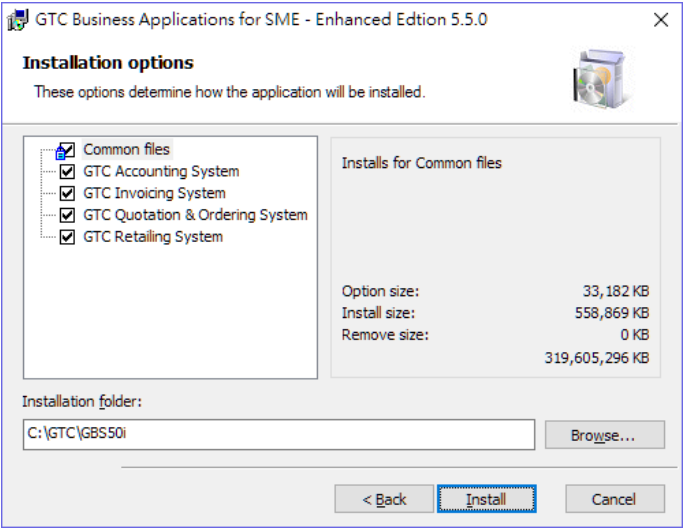

Figure 1-5 Select Systems and Destination Folders

Default folder for GTC Applications installed is C:\gtc\gbs50p (Professional Edition) or c:\gtc\gbs50i (Enhanced Edition). Click [Browse(R)] button to install to another folder. Otherwise click [Install (I)] to install the system.

Figure 1-6 Installation in progress

When the Application is successfully installed, the following screen will be displayed. Otherwise, you should install once again.

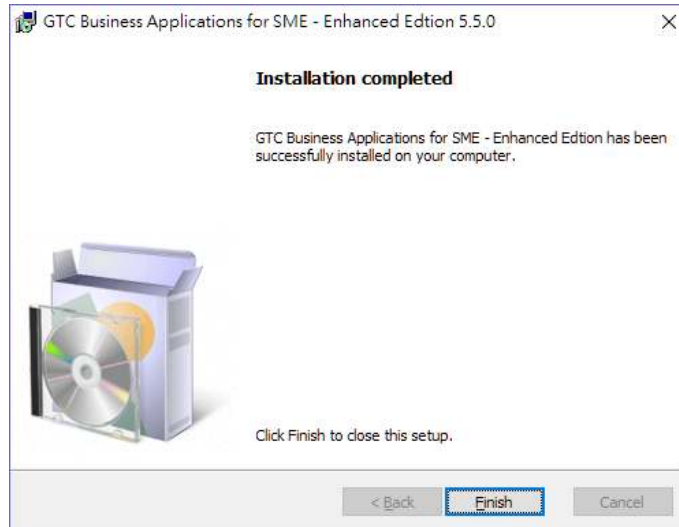

Figure 1-7 Installation Completed

Firebird Installation will be executed after GTC Applications installed. Please choose [Full installation of server and development tools] if this computer will be also worked as a role of database server. Otherwise, please choose [Minimum client install – no server – no tools] for this computer.

The detail procedures for installing Firebird / Interbase, please refer to the user manual of Firebird / Interbase or the chapter of [Firebird Installation] in this manual.

1.4 Network Version Installation

If GTC applications are used in local network, please execute the Installation Program in each workstation.

1.4.1 Installation in server side

- a) Execute GTC installation program in server.
- b) Select [Yes] to install the database program, Firebird.
- c) If no message showed to install Firebird, please check whether Firebird installed. If not, please execute the installation program in the folder of Firebird under GTC installation folder. Default folder is c:\gtc\gbs50p (Professional Edition) or c:\gtc\gbs50i (Enhanced Edition). Firebird installation program can also be downloaded from <http://www.firebirdsql.org>.
- d) Select [Full installation of server and development tools] when Firebird installing.

- e) [Server Name] in [Multi Company Control] can be the name of this computer, LocalHost or 127.0.0.1.

1.4.2 Installation in client side

- a) Execute GTC installation program in server.
- b) Select [Yes] to install the database program, Firebird.
- c) If no message showed to install Firebird, please check whether Firebird installed. If not, please execute the installation program in the folder of Firebird under GTC installation folder. Default folder is c:\gtc\gbs50p (Professional Edition) or c:\gtc\gbs50i (Enhanced Edition). Firebird installation program can also be downloaded from <http://www.firebirdsql.org>.
- d) Select [Full installation of server and development tools] when Firebird installing if there is a need to store the data in this computer. Otherwise, [Minimum client install – no server – no tools] should be selected.
- e) [Server Name] in [Multi Company Control] should be the name or IP address of the server. If the data restored in the computer, [Server Name] should be the name of this computer, LocalHost or 127.0.0.1.

To create a company data which can be accessed automatically by other workstations, please refer to following steps:

- a) Share a folder for public in server, e.g. gtcmmcom. Please share the security permission of this folder to Read, Write, Add and Delete.
- b) Map the shared folder as local drive in client side computer, e.g. Z:\.
- c) Find and execute gcfg.exe in GTC installation folder. Default folder is c:\gtc\gbs50p (Professional Edition) or c:\gtc\gbs50i (Enhanced Edition).
- d) Input the name set in (b) (e.g. Z:\) in [Multi-Company Data Path] of [Local Configuration Tools]. Or input \\ServerName\gtcmmcom to replace the method (b).
- e) Press [Save and Exit] when finished.

1.5 Software Dog installation

In the package, there is a hardware protection device - Software Dog that shall be inserted into USB port. Otherwise, it will be treated as a trial version. The trial version is just same as released version except there is a limitation, up to 100 records. Thus, if trial version had been installed, there is no need to install the Application again provided that the version is same and Software Dog is installed.

1.5.1 Installation Steps:

- a) Install GTC applications firstly.
- b) Insert Software Dog into USB port of the computer. Operating System will install Software Dog Driver automatically. During the process, you may be asked to press [OK] button.

If there is a problem, please search a file named MicroDogInstdrv.exe in Driver folder under the folder of GTC Applications installed. Default folder is C:\gtc\gbs50p\Driver (Professional Edition) or c:\gtc\gbs50i\Driver (Enhanced Edition). Double click this file and press [Install Driver] to install Software Dog driver.

If there is no USB port in your computer, please contact us.

1.5.2 Un-installation

To un-install Software Dog driver, please search a file named MicroDogInstdrv.exe in Driver folder under the folder of GTC Applications installed. Default folder is C:\gtc\gbs50p\Driver (Professional Edition) or c:\gtc\gbs50i\Driver (Enhanced Edition). Double click this file and press [Uninstall Driver] to uninstall Software Dog driver.

Chapter 2 Functions and Operations

2.1 Multi Company Control System

Multi Company Control is to handle different data for different companies or different financial years.

2.1.1 Create a company data

The following figure will be displayed when you open Multi Company Control System. Fill in relevant information, press [Save] to save the record and exit. To abort the record, just press [Cancel] to exit without save.

Figure 2-1 Multi Company Control System

Company short name Company short name is the name of a company data and used for the name of data path. Please just use letter or number for company short name. The requirement for creating a name of data path, please refer to the requirement of your Operating System.

For example, if “demo” is the company short name, the database name will be demo.fdb.

Note: if Firebird/Interbase is installed in Linux, “demo” and “Demo” will be treated as two different names.

English Description Detail description in English for a company data.

Chinese Description Detail description in Chinese for a company data.

Database Information:

Local Server Please mark ‘✓’ if Firebird/Interbase server and GTC applications are

installed in same computer. Otherwise, please cancel '✓'.

Server Name Computer Name or IP address of Firebird/Interbase server installed: e.g. FirstServer or 192.168.1.1. If Local Server be chosen, Server Name and Protocol will be hidden.

Protocol Protocol is used for the communication between GTC Applications and Firebird / Interbase server. Please ensure that the client machine is able to see the host machine in the network. For example, if the server's IP address in the domain that is visible to the client is 192.168.1.1, go to a command shell and type the command ping 192.168.1.1 substituting this example IP address for the IP address that the server is broadcasting.
TCP/IP protocol is recommended to be used.

Database File Path

The path for database file. It should be the directory in the computer with Firebird / Interbase server installed. For example, the database file will be in the directory of the computer with Firebird / Interbase server installed is c:\gtc\gbs50p\data (Professional Edition) or c:\gtc\gbs50i\data (Enhanced Edition). Thus, the database file path should be filled with c:\gtc\gbs50p\data (Professional Edition) or c:\gtc\gbs50i\data (Enhanced Edition).

All database files should be in same directory with different file names. For example, the file name for ABC Company is abc.fdb or for demo company is demo.fdb. These two database files both are in c:\gtc\gbs50p\data (Professional Edition) or c:\gtc\gbs50i\data (Enhanced Edition).

The authority of database server to read, add, edit and delete in database file directory should be assigned in this directory.

User Name / Password

It is for Firebird / Interbase. The default user name and password of Firebird / Interbase's administrator account, SYSDBA and masterkey respectively, will be used.

The fields of user name and password is hidden. Press [F5] to disclose or hidden the fields.

Test Connect It is to test whether GTC Applications connects with Firebird / Interbase server and check whether the database file exists. If the connection is OK but the database file doesn't exist, the database file will be generated automatically on request.

2.1.2 Open a company data

All company data are shown in Multi Company Control System. Please use the mouse to double click a company data or choose a company data and then press [Enter].

2.1.3 Edit a company data

The existing company data can be altered by pressing the button [Edit].

There are some tips for your reference.

- 1) Company Short Name can't be altered. You can delete the existing one and add a new company data to replace the existing one.
- 2) If the data path is altered, the existing data will not be moved to a new directory. Moreover, the data in the original folder will not be deleted for security reason.

2.1.4 Delete a company data

To delete an existing company data, you can just press the button [Delete]. However, the Application will not delete the data in the original folder for security reason. If you want to delete the data in the original folder, you should do it via Operating System, such as Windows Explore.

If you have not deleted the data in the original folder and want to read the data again, you can just create a company data and type the data path as the original path.

2.2 First time to the Application

The Application will automatically execute the initialization when the user is first time to the Application. There are some basic information should key in. Of course, this information can be altered lately.

Firstly, the Application will show User Login interface (default user name and password is SUPERVISOR and PASSWORD respectively). And then, the interface for Company Information, Currency, System Numbers, Warehouse(GIS & GOS & GRS) (Enhanced Edition only), Tax File (GIS & GOS & GRS) and Accounting Period (GAS) will be shown. Please input the information according to your company.

2.3 Exit

Use the mouse to double click Exit icon on Functions bar or select Exit on main menu.

Note: Please exit the Application before shut down the computer. It may cause damage on data if the computer has been shut down or stop inappropriately before exit the Application.

2.4 Menu

2.4.1 Main Menu

There are many functions in Main Menu.

Main Menu of GTC Accounting System including:

The functions include Transfer Voucher Entry, Income Voucher Entry, Expenses Voucher Entry, Debit Note Entry, Credit Note Entry, Bank Reconciliation, A/R Payment Entry, A/P Payment Entry, Language, Set Default Language, Login as Other User and Exit.

Transfer Voucher Entry It is for user to Read, Add, Edit and Delete a transfer voucher.

Income Voucher Entry To handle Income Voucher related with bank.

Expenses Voucher Entry To handle Expense Voucher related with bank.

Debit Note Entry To input the information of Debit Note and send notice to customers.

Credit Note Entry It is for user to input the information of Credit Note and send notice to vendors.

Bank Reconciliation It is to reconcile the transactions of bank accounts.

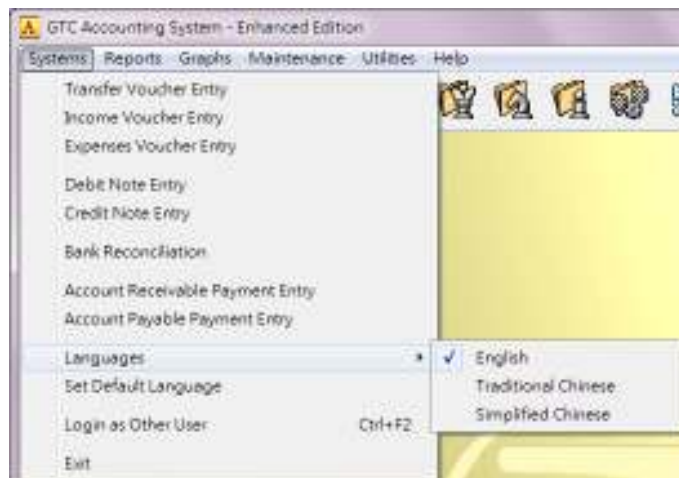

Figure 2-2 Main menu of GAS

A/R Payment Entry It is to record the payment of individual invoice and to settle A/R. The information is useful to prepare monthly statement to customer and for A/R analysis.

A/P Payment Entry It is to record the payment of vendor invoice and to settle A/P.

Main Menu of GTC Invoicing System including:

The functions include Sales Invoice Entry, Sales Return Entry, Vendor Invoice Entry, Purchase Return Entry, Delivery Note Entry, Packing List Entry, Pickup List Entry, Stock Transfer Note Entry, Stock Adjustment Entry, A/R Payment Entry, A/P Payment Entry, Language, Set Default Language, Login as Other User and Exit.

Sales Invoice Entry To Browse, Add, Edit and Delete a sales invoice.

Sales Return Entry To handle sales return from customer.

Sales Invoice Return Entry
To handle the large volume of the delivered invoices and the payment of these invoices daily.

Vendor Invoice Entry It is to input vendor invoices and to handle stock and A/P.

Purchase Return Entry To handle purchase return to vendor.

Delivery Note Entry It is to handle the delivery of goods. The content can be copied from sales invoice and modified partly by user.

Packing List Entry It is to input the information of a packing list.

Pickup List Entry To handle the consolidation of stocks for different invoices.

Stock Transfer Note Entry (Enhanced Edition only)
It is to transfer the stock from one warehouse to another warehouse.

Stock Adjustment It is for user to adjust the quantity of individual stock. This function can be used when the actual stock quantity is different from book balance caused by material loss, stolen, etc.

Stock Take Entry It is for user to input the stock take quantities of individual stock. The System will compare with Stock On Hand quantities and adjust the quantities automatically. It supports the importation of the text file generated from Data Collector.

A/R Payment Entry It is to record the payment of individual invoice and to settle A/R. The information is useful to prepare monthly statement to customer and for A/R analysis.

A/P Payment Entry

It is to record the payment of vendor invoice and to settle A/P.

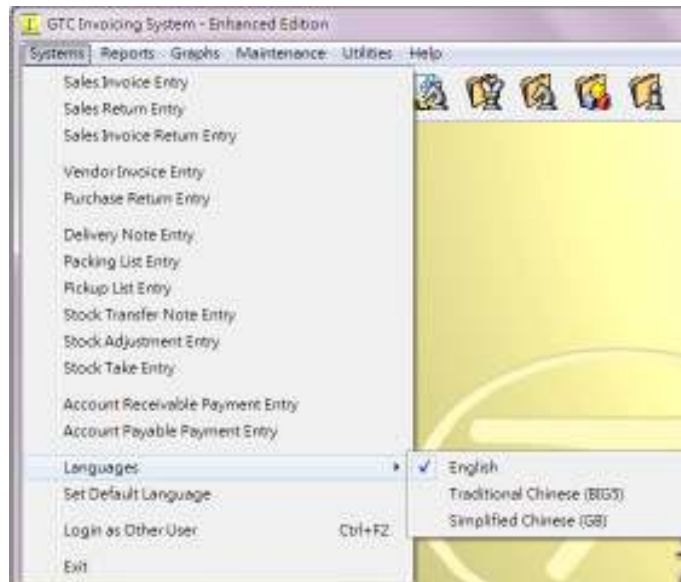

Figure 2-3 Main menu of GIS

Main Menu of GTC Quotation& Ordering System including:

The functions include Quotation Entry, Sales Order Entry, Purchase Order Entry, Stock Transfer Note Entry and Stock Adjustment, Language, Set Default Language, Login as Other User and Exit.

Quotation Entry

To Browse, Add, Edit and Delete a quotation.

Sales Order Entry

To handle customer's sales order.

Purchase Order Entry

To handle the purchase from vendor.

Stock Transfer Note Entry (Enhanced Edition only)

It is to transfer the stock from one warehouse to another warehouse.

Stock Adjustment

It is for user to adjust the quantity of individual stock. This function can be used when the actual stock quantity is different from book balance caused by yield, stolen, etc.

Stock Take Entry

It is for user to input the stock take quantities of individual stock. The System will compare with Stock On Hand

quantities and adjust the quantities automatically. It supports the importation of the text file generated from Data Collector.

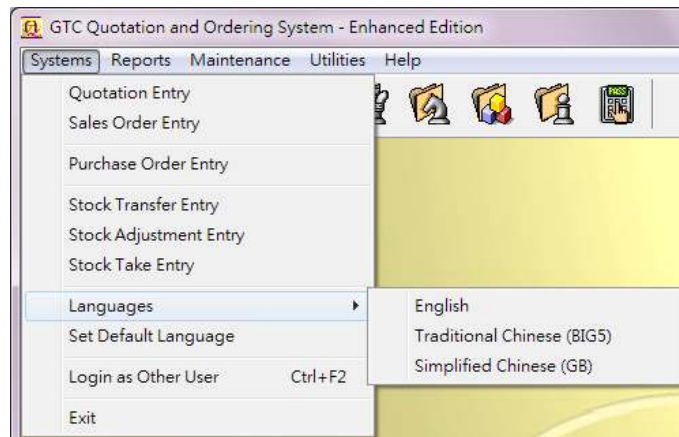

Figure 2-4 Main menu of GOS

Common functions:

Language	In Language menu, there are three choices: English, Traditional Chinese and Simplified Chinese.
Set default Language	You can use this function if designated language interface is to be used for every entry.
Exit	To shut down the Application and release RAM. Exit button on Function bar has same function.

2.4.2 Report menu

There are many kinds of reports. All reports are helpful to analyze your company's operation and financial position. Please refer to the report samples.

Report menu of GTC Accounting System:

The categories of reports are: General Ledger Reports, Account Receivable Reports, Account Payable Reports, Debit Note/Credit Note Reports, Job Reports (Enhanced Edition only) and Staff Reports.

2.4.3 File Maintenance menu

All system files are under File Maintenance menu. Before input any transactions, you should finish these system files.

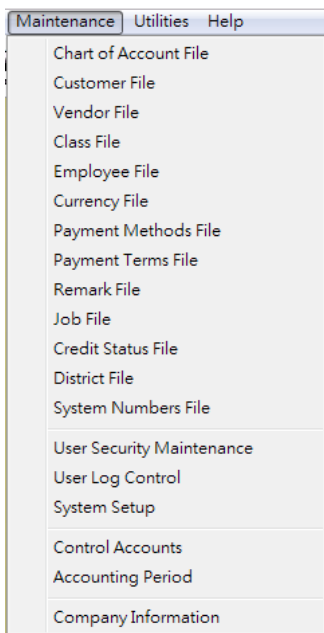

Figure 2-8 File Maintenance of GAS

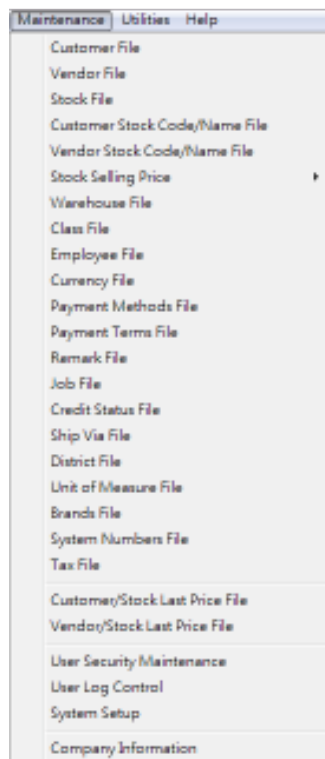

Figure 2-9 File Maintenance of GIS & GOS

2.4.4 Utilities menu

- Backup Data** It is to compress the data to the target directory which can be floppy diskette, hard disk, CD-RW or ZIP drive. Of course, the device, you chose, should be supported by your Operation System.
If there are many data to backup, more than one diskette may be requested. Please place the diskettes with backup data in a safe place with right label.
- Restore Data** This function is to restore the backup data to current directory. Please choose source driver and press OK button to restore data. If backup data in two or more diskettes, please insert the diskettes by order.
- Adjust Closing Stock Value**
This function is to adjust the closing stock value for each month end. To do it, just by choosing the accounting period to modify, and input new stock value.
- Year End** It is to bring forward the balance to next year.
- Database Tools** There are following functions:
- Empty all transaction files
 - Clear all data
 - Delete Customer Opening Balance
 - Delete Vendor Opening Balance
 - Delete Stock Opening Balance
- Transaction Auditor**
When the database had been damaged or there was a problem in hardware, the outstanding of customers, vendors and stocks may be incorrect. This function is to correct such errors.
- Import Data** Import Data from Other Company / Location
This function is to consolidate the data from different companies /locations.
- Import Data from Other Format File**
This function is for the user to import the data of master files from other format files. The data of transactions files, such as sales invoices or vouchers, can't be imported to GTC applications.
- Export Data** Export Data from the Application
This function is to minimize the data traffic between head office and branches. It can be done via email, CD, FTP or VPN, etc.
- Export Data to Other Format**
User can export the data to other formats, supporting more than 10

general file formats.

Figure 2-10 Utilities

2.4.5 Help Menu

Contents	Online Help's main directory will be shown here. You can choose an appropriate item.
How to Use Help	The descriptions, for how to use Online Help, are provided by Operating System.
About...	To show software name, version, copyright, company name and contact method.

2.4.6 Speed Button

There is a range of buttons in main window for the user to choose the desired functions directly. To press the button by mouse, the functions related to the buttons will be displayed. Please refer to the following:

Figure 2-11 Speed Buttons of GAS

Figure 2-12 Speed Buttons of GIS

Figure 2-13 Speed Buttons of GOS

2.5 Choosing and searching records

To be more simplification and precision, the Application uses put down menu for user to choose the desired data. Here, three examples, date selection, put down menu and dialog box, are elaborated.

2.5.1 Selecting a date

In the Application, user can press the downward arrow beside the date field to call a calendar. For previous month, left hand side arrow should be pressed. For next month, right hand side arrow should be pressed. Finally, use the mouse to choose the desired date.

Figure 2-14 A calendar

2.5.2 Put down Menu

Put down menu is usually used in searching item by number. To press the arrow on right side, the desired data will be displayed. You can use the mouse to choose one. Of course, you can input the data in the field by using keyboard. The Application will jump to the records related to the data your input. For example, if character “2” input, the Application will automatically jump to the records with “2” as the beginning.

Account Code	English Account Name	Chinese Account Name	Current Balance
1010	Petty Cash	零用現金	10,427.00
1020-10-10	Hong Kong Bank Current Account	匯豐銀行支票戶口	-136,238.00
1020-10-20	BOC Current Account	中國銀行支票戶口	-16,200.00
1020-20-10	Hang Seng Bank Saving Account	恆生銀行儲蓄戶口	55,108.00
1020-20-20	Hong Kong Bank Saving Account	匯豐銀行儲蓄戶口	65,000.00
1020-30	Time Deposit	定期存款	172,884.00
1030	Prepayments	預付款項	15,000.00
1050	Invoice Deposit	發票按金	0.00

Figure 2-15 Put Down Menu

2.5.3 Search records

2.5.3.1 Search Dialog Box

Search Dialog Box is used to search the records by more than one index, for example, Invoice No, Customer Code or Stock Code, etc.

To search a record, you should just input the appropriate data in “Search Character” field. The Application will jump to the mostly similar records. Incremental searching method is used. For example, if “AB” input, the Application will jump to the record beginning with “AB”. Therefore, if more information input, the more precise record will be shown.

If you want to change the search index, for example, searching a record by English Account Name, you can just press column header - “English Account Name”.

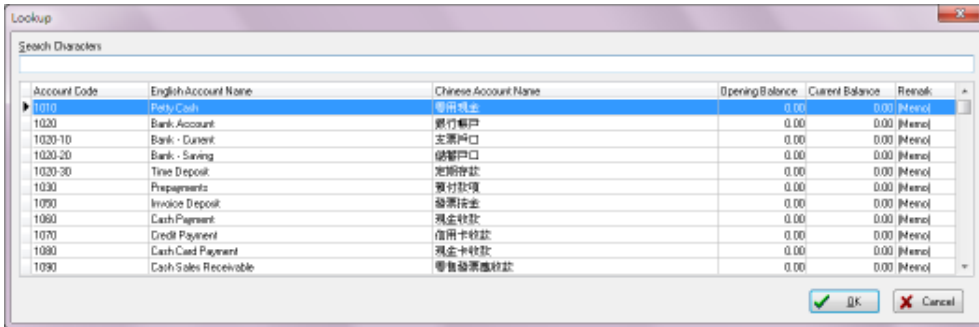

Figure 2-16 Search Dialog Box

2.5.3.2 Advance Search

Advance Search is designed for user to search the record easily and quickly by the main data fields with different criteria. Advance Search can be used for searching a record in Maintenance files and a record in transaction files.

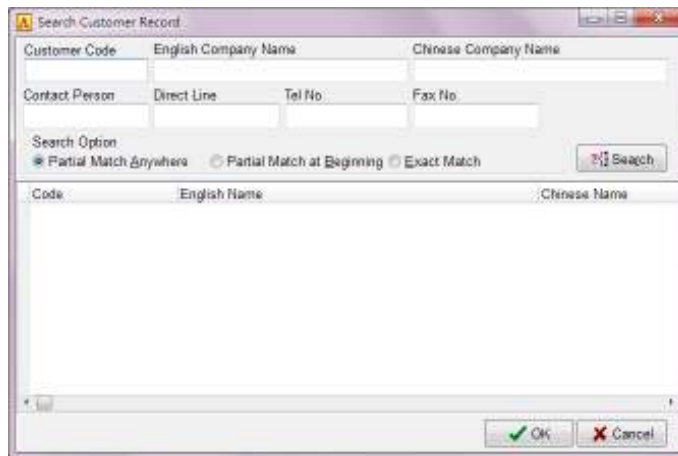

Figure 2-17 Advance Search for searching a customer

Figure 2-18 Advance Search for searching a debit note

To search a record, you should just input the search factor in appropriate data field and select one Search Option. Press [Search] button, the records matched with the search factor will be displayed.

2.6 Function Keys

There are a series of function keys for user to call the desired function directly. To press the function keys on the keyboard, the relative function will be executed by the Application.

- F1** On any interfaces, press [F1] to call Online Help for current interface.
- F2** Under Browse mode, press [F2] to add a new record.
Under Insert/Edit mode, press [F2] to save the record.
- F4** Under Browse mode, press [F4] to search the transaction records.
- F5** On the transaction interfaces, users can press [F5] to browse or amend the stock information, such as the cost price and the detail description.
- F6** On the transaction interfaces, user can add a new record to maintenance files without exiting the transaction interface. To do this, just by pressing [F6] on the appropriate fields, such as customer code, currency or salesman, etc. The interface of relative maintenance files will be displayed. When finished, press Exit to close this interface and the current record will be copied to this transaction.

- F7** In GTC Invoicing System, user can call Last Price File by pressing [F7] in the interfaces of Sales Invoice Entry, Sales Return Entry, Vendor Invoice Entry and Purchase Return Entry.
- F8** In Print Dialog Box, press [F8] to execute Report Designer to modify the report format.
- F10** Under Browse mode of any transactions, press [F10] to call Print Dialog Box.
- F12** Send out reports via e-mail.
- Insert** Press [Insert] to add a new line for inputting a new record in multi line grid interface.
- Ctrl-Del** To input items, press [Ctrl] + [Delete] to delete the record at cursor position.
- Ctrl-E** To change to English interface.
- Ctrl-B** To change to traditional Chinese interface.
- Ctrl-S** To change to simplified Chinese interface.

2.7 Send reports by e-mail

All reports in GTC Applications can be sent out to the designated person via e-mail. To call this function, presses [F12] in Print Dialog Box or right click the mouse in Print Dialog Box to choose [Send Report by Mail]. The reports in JPG format will be created by GTC Applications and attached in the e-mail. The speed of this process depends on the size of the reports. Progress bar will be displayed for reference.

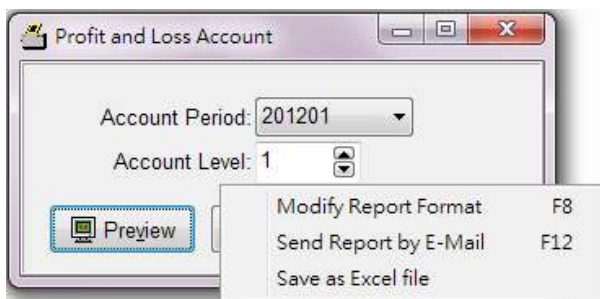

Figure 2-19 Print Dialog Box

When the reports in JPG format created, Figure 2-18 will be displayed. Now, you can key in recipient's address, subject, and message. And then press [Send] to send out the mail.

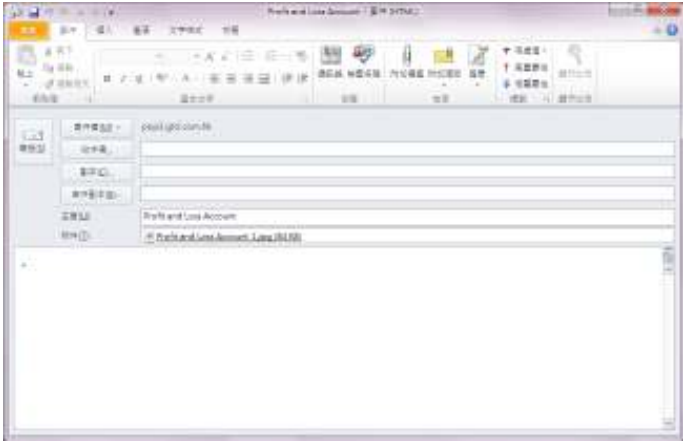

Figure 2-20 New Messages

2.8 Export reports to Excel file

There are 2 methods exporting reports to Excel file, Print or Save As in GTC Applications. The result is different.

2.8.1 Print reports to Excel file

All reports in GTC Applications can be printed out to Excel file. By this method, the reports are printed to Excel file just like printed to a paper. Therefore, each page of reports is presented with report header and report footer. The format can be influenced by Report Designer.

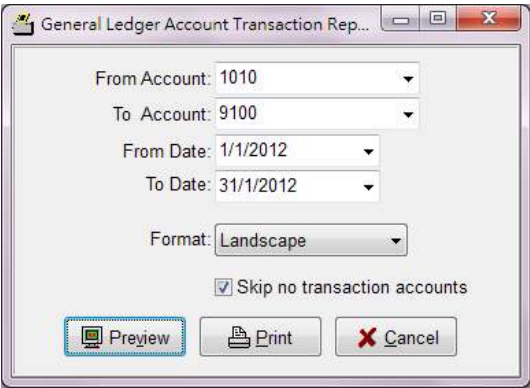

Figure 2-21 Print Dialog Box

Press [Print] button in Print Dialog Box to call Printer Dialog Box. Choose [Print to File], select the type of file and the folder to save.

Figure 2-22 Printer Dialog Box

2.8.2 Reports Save As Excel file

Some reports in GTC Applications can be Save As Excel file. By this method, the contents of reports, together with calculation formula, are saved to Excel file. Therefore, the report header and report footer will be shown once for each report. The format can't be influenced by Report Designer.

In Print Dialog Box, right click the mouse to choose [Save as Excel file] and select the appropriate folder to save the report.

Figure 2-22 Save as Excel File

Chapter 3 General Files Management

There are many common files in the Application. In which, some files are very important. In this chapter, we will introduce some key points for these common files.

3.1 Company Information

The content of Company Information includes user's basic information: company name, address, telephone number, BR number , fax number, etc. All fields in this file are not necessary to fill in. However, company name will be shown at almost all reports. Thus, company name should be filled in.

It is easy to handle Company Information. It is only to fill the data in certain fields and press OK to save the data.

Figure 3-1 Company Information

3.2 Currency File

Currency File divides into two parts: Local currency and Foreign currency. Local currency is the currency used by the user at his place and to be used in company's financial reports. The exchange rate is 1. You should input all information including code, Chinese description, English description, and exchange rate.

- Code Currency's short name, up to 4 characters.
- Chinese Description Chinese description for this currency.
- English Description English description for this currency.

Exchange Rate Exchange rate for local currency is 1. The exchange rate for foreign currency is one unit foreign currency equal to how much local currency. For example, if local currency is HK Dollar. One US Dollar can change for 7.8 HK Dollars. The exchange rate for US Dollar is 7.8.

If you are first time to this file, please fill in all information and choose one currency as local currency. If the exchange rate of the chose currency is not equal to 1, the Application will automatically change the exchange rate of the chose currency to 1 and the exchange rate of other currencies will be adjusted to correct value.

Figure 3-2 Currency File

3.3 System Numbers File

System Numbers File records the initial number for every transaction. For example, if you want to set the next invoice number is SI12038, you can just input SI12038 in the relative field.

All transaction numbers will be incremental automatically.

Note: Each type of transaction numbers should be differentiated. The simple method is to add a character in front of number. For example, add 'SI' in front of Sales Invoice number and add 'DN' in front of Delivery Note number, etc.

Figure 3-3 System Numbers File

3.4 Chart of Accounts File (GAS)

3.4.1 Basic Information

If default chart of accounts have been chosen when a company data is first time to be executed, a series of chart of accounts built by the Application will be shown. User can Add, Edit or Delete chart of account according to your company.

Field Description:

Account Code Short name for accounts with maximum 20 characters.

English Account Name English name for the account with maximum 60 characters.

Chinese Account Name Chinese Name for the account with maximum 60 Chinese characters.

Detail Account Detail Account is to record the transactions. There is no sub account under the Detail Account. If the account is used to record the transaction, please mark '✓' in this field.
The account, not Detail Account, can have sub account but cannot be used to record the transactions.

Level The level for all accounts. The 1st level is the highest level and the 4th level is the lowest level.

Up Level Account

To assign a higher level account relative to this current account. You should assign the up level account to all accounts unless this current account is the 1st level.
The account type for this current account should be the same as up level account.

The screenshot shows a software window titled "Chart of Account File" with two tabs: "Basic Information" and "Budget Information". The "Basic Information" tab is active. It contains the following fields and values:

- Account Code: 1010
- English Account Name: Petty Cash
- Chinese Account Name: 零用現金
- Level: 1
- Upper Level Account: (empty)
- Currency: HKD
- Category: Normal Account
- Account Type: Current Assets
- Opening Balance: 0.00
- Current Balance: 0.00
- Remarks: (empty text area)

At the bottom, a status bar indicates "Modified Date: 23/12/2011 15:58:23 Modified By: SUPERVISOR". Below the status bar are several icons and buttons: "Add", "Edit", "Delete", "Cancel", "Save", and "Exit".

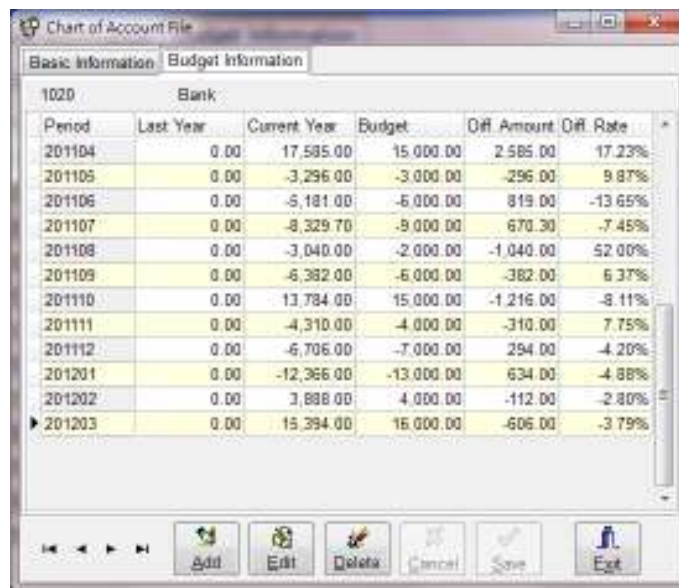

Figure 3-4 Charts of Accounts – Basic Information

Currency	The currency selected here will be filled as default currency of this account in voucher entry. It can be altered.
Category	It divides into Account Receivable Account, Account Payable Account, Bank Account and Normal Account. A/R Account and A/P Account can be chosen in Customer File or Vendor File respectively. Bank Account can be chosen in Bank Reconciliation. Normal Account can be chosen in all transactions which are out of the above three categories.
Account Type	Classification for the accounts, which will be used to define the position of financial reports.
Opening Balance	It is the opening amount of an account for this financial year.
Current Balance	Opening balance plus total amount for all related transactions in this financial year.
Remark	Detail description for chart of accounts.

3.4.2 Budget Information

It includes the amount of Last Year, Current Year and Budget. The amount of Current Year will be filled by GTC Application automatically. Different Amount and Rate are calculated by GTC Application, compared with Budget and Current Year.

Last Year	Automatically filled if executed Year End in GTC Accounting System. It is the actual amount of last financial year. It can be input or modified by user. Note: (1) Positive figures represent debit balance. Negative figures represent credit balance. (2) The accounting period must match for both years, last year and current year.
Current Year	Actual amount of current financial year. It will be filled by GTC Application automatically. User can't edit or modify.
Budget	Budget amount of current financial year, input by user.
Diff. Amount	Different Amount is the difference between Budget and Current Year in amount, calculated by GTC Application.
Diff. Rate	Different Rate is the difference between Budget and Current Year in percentage, calculated by GTC Application.

Period	Last Year	Current Year	Budget	Diff. Amount	Diff. Rate
201104	0.00	17,585.00	15,000.00	2,585.00	17.23%
201105	0.00	-3,296.00	-3,000.00	-296.00	9.87%
201106	0.00	-5,181.00	-5,000.00	819.00	-13.65%
201107	0.00	-8,329.70	-9,000.00	670.30	-7.45%
201108	0.00	-3,040.00	-2,000.00	-1,040.00	52.00%
201109	0.00	-6,382.00	-6,000.00	-382.00	6.37%
201110	0.00	13,784.00	15,000.00	-1,216.00	-8.11%
201111	0.00	-4,310.00	-4,000.00	-310.00	7.75%
201112	0.00	-6,706.00	-7,000.00	294.00	-4.20%
201201	0.00	-12,366.00	-13,000.00	634.00	-4.88%
201202	0.00	3,888.00	4,000.00	-112.00	-2.80%
201203	0.00	15,394.00	16,000.00	-606.00	-3.79%

Figure 3-4 Charts of Accounts – Budget Information

3.5 Accounting Period (GAS)

Accounting Period is the time range for one financial year. It can be any number greater than one. The default range is 12 months. Please refer to the following figure.

Figure 3-5 Accounting Period set up

When a new company data created, you should key in Start Date for the financial year. End Date is Start Date plus Accounting Period and will be calculated by the Application. Year End executed before End Date is allowed.

After all records or transactions have been deleted by Utility Tools, new Accounting Period will be requested to set up.

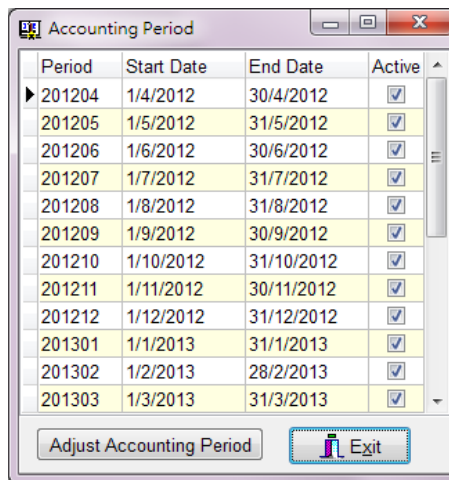

Figure 3-6 Accounting Periods

User can control to Add, Edit or Delete any transactions in a specific Accounting Period by marking '✓' in Active field shown in Figure 3-6. If no '✓' in Active field, any transactions in this Accounting Period cannot be Add, Edit or Delete.

3.6 Control Accounts (GAS)

To use with GTC Invoicing System and generate financial reports, data linkage between accounts is important. When Chart of Accounts has been set up, user should classify the

accounts into A/R, A/P, or Retained Earning, etc. The Chart of Accounts List can be different, but data linkage between accounts is same.

If default Chart of Accounts is to be used, there is no need to change the settings of Control Accounts.

3.6.1 Sales Related Accounts

Product Sales	Sales account for the stock item classified as Product type in Stock File. The sales of this stock item in Sales Invoice Entry will be credited to this account.
Service Income	Sales account for the stock item classified as Service type in Stock File. The sales of this stock item in Sales Invoice Entry will be credited to this account.
WIP Sales	Sales account for the stock item classified as WIP type in Stock File. The sales of this stock item in Sales Invoice Entry will be credited to this account.
Material Sales	Sales account for the stock item classified as Raw Material type in Stock File. The sales of this stock item in Sales Invoice Entry will be credited to this account.
Other Stock Sales	Sales account for the stock item classified as Other type in Stock File. The sales of this stock item in Sales Invoice Entry will be credited to this account.
Remark Sales	Sales account for non-stock item sales. If an item without stock code in Sales Invoice Entry, the sales for this item will be classified as Remark Sales and be credited to this account.
Freight Charges	Freight Charges input in a sales invoice will be credited into this account.
Other Charges	Other Charges input in a sales invoice will be credited into this account.
Sales Deposit	Deposits of a sales invoice will be debited to this account.
Sales Discount	Total discount 1 & 2 of a sales invoice will be debited to this account.
Sales Tax	Sales tax of a sales invoice will be recorded to this account.

Figure 3-7 Control Accounts (Sales Related Account)

Default Sales Return	Default account for Sales Return.
Account Receivable	All transactions related to customers will be recorded to here.
A/R Payment	In A/R Payment Entry, user can settle the customer payment by different payment methods. Thus, Account Code in Payment Method File should be selected appropriately. If the account code not selected in Payment Method File, this account will be used.

3.6.2 Purchase Related Accounts

Product Purchase	Purchase account for the stock item classified as Product type in Stock File. The purchase of this stock item in Vendor Invoice Entry will be debited to this account.
Service Purchase	Purchase account for the stock item classified as Service type in Stock File. The purchase of this stock item in Vendor Invoice Entry will be debited to this account.
WIP Purchase	Purchase account for the stock item classified as WIP type in Stock File. The purchase of this stock item in Vendor Invoice Entry will be debited to this account.
Material Purchase	Purchase account for the stock item classified as Raw Material type in Stock File. The purchase of this stock item in Vendor Invoice Entry will be debited to this account.
Other Stock Purchase	Purchase account for the stock item classified as Other type in Stock File. The purchase of this stock item in Vendor Invoice Entry will be debited to this account.

Remark Purchase	Default purchase account for non-stock item purchase. If an item without stock code in Vendor Invoice Entry, the purchase for this item will be classified as Remark Purchase and be debited to this account.
Freight Cost	Freight Cost input in a vendor invoice will be debited into this account.
Other Cost	Other Charges input in a vendor invoice will be debited into this account.
Purchase Deposit	Deposits of a vendor invoice will be credited to this account.
Purchase Discount	Total discount 1 & 2 of a vendor invoice will be credited to this account.
Purchase Tax	Purchase tax of a vendor invoice will be recorded to this account.

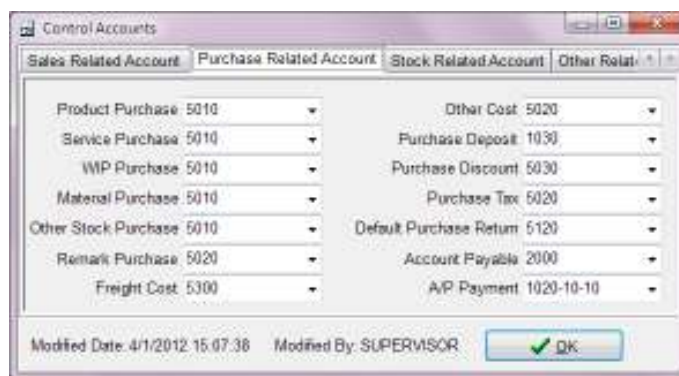

Figure 3-8 Control Accounts (Purchase Related Account)

Default Purchase Return	Default account for Purchase Return.
Account Payable	If the field of A/P Account in Vendor's File is blank, all A/P related to the vendors will be recorded to this account. Otherwise, A/P related to the relevant vendor will be credited to the A/P Account filled in Vendor's File.
A/P Payment	In A/P Payment Entry, user can settle the vendor payment by different payment method. Thus, Account Code in Payment Method File should be selected appropriately. If the account code not selected in Payment Method File, this account will be used.

3.6.3 Stock Related Accounts

- Opening Stock** This account is to record total value of Opening Stock for this financial year.
- Closing Stock** This account is to record total value of Closing Stock for each month end. To input the value, please choose Adjust Closing Stock Value under Utilities menu.

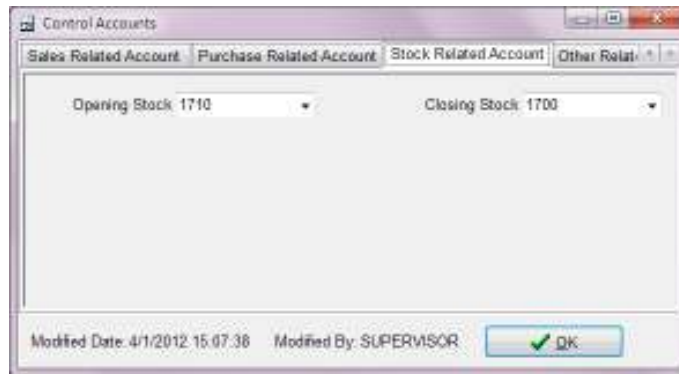

Figure 3-9 Control Accounts (Stock Related Account)

3.6.4 Other Related Accounts

- Retained Earnings** This account is to record Retained Earnings for past years. After Year End is executed, Retained Profit/Loss for this financial year will be brought forward to this account.
- Exchange Difference** The account is to record the loss / gain caused from foreign currency exchanged to local currency.

Figure 3-10 Control Accounts (Other Related Account)

3.7 Tax File (GIS, GOS & GRS)

The Application supports different taxation for multi countries. The following figure is a sample of Value Added Tax of China.

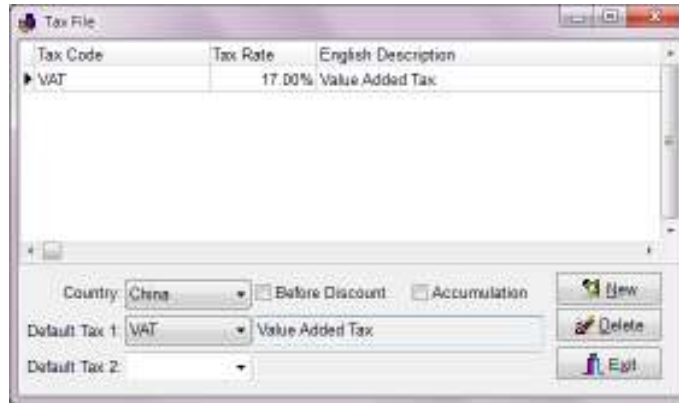

Figure 3-11 Tax File

Tax Code	Short name given by users.
Tax Rate	Tax Rate is defaulted as percentage. Thus, please just input the digit.
English Description	Detail description in English for a tax.
Chinese Description	Detail description in Chinese for a tax.
Country	Select an appropriate country for the taxation used. For example, choose “China” if China VAT is used.
Before Discount	If the taxation is calculated based on invoice amount before discount, please mark ‘✓’ in this field.
Accumulation	If there are more than one type of taxes on one invoice and the later one is calculated based on invoice amount plus precious tax, please mark ‘✓’ in this field.
Default Tax 1 & 2	Default Tax 1 is relative to the Sales Tax 1 of sales transactions. Default Tax 2 is relative to the Sales Tax 2 of sales transactions. Generally speaking, Default Tax 1 is regional tax and Default Tax 2 is country tax. In U.S.A, Default Tax 1 is state tax and Default Tax 2 is federal tax. Default Tax 1 and 2 should be blank if there is no sales tax.

3.8 Payment Terms File

Code	Short name for payment terms.
Chinese Description	Detail description of a payment term in Chinese.
English Description	Detail description of a payment term in English.
Credit Days/Months	It is to record the credit days. When an invoice is issued, the payment date will be automatically calculated by the Application based on these credit days and the Closing Date set in Customer File and Vendor File.
Unit	Credit terms in days or months.

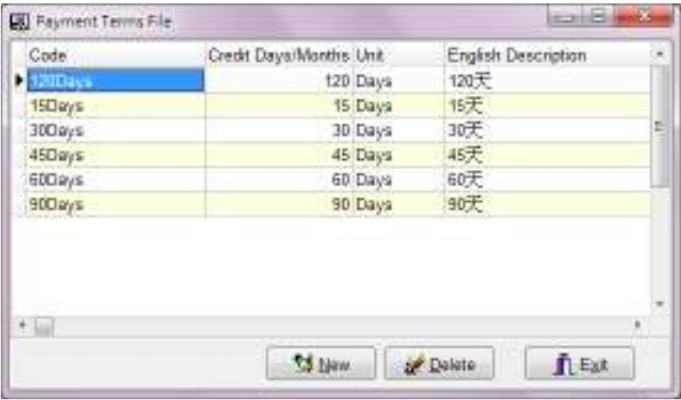

Figure 3-12 Payment Terms File

3.9 Payment Methods File

Code	Short name for payment method.
Chinese Description	Detail description of a payment method in Chinese.
English Description	Detail description of a payment method in English.
Account Code	If there are deposits in a sales invoice, the account code selected here will be used. Otherwise, A/R Payment account selected in Control Accounts will be used.

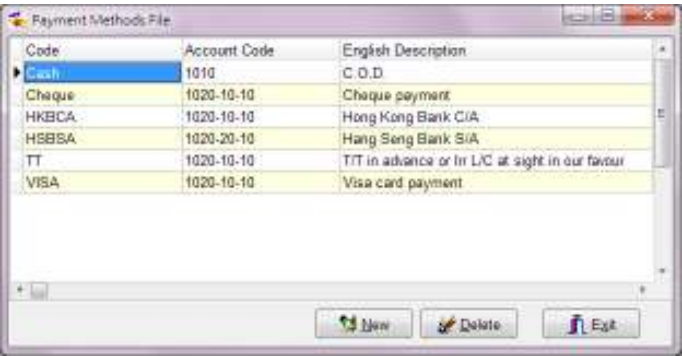

Figure 3-13 Payment Methods File

3.10 Class File

- Code Short name for a class.
- Chinese Description Detail description in Chinese for a class.
- English Description Detail description in English for a class.
- Type To differentiate the class for different maintenance files.

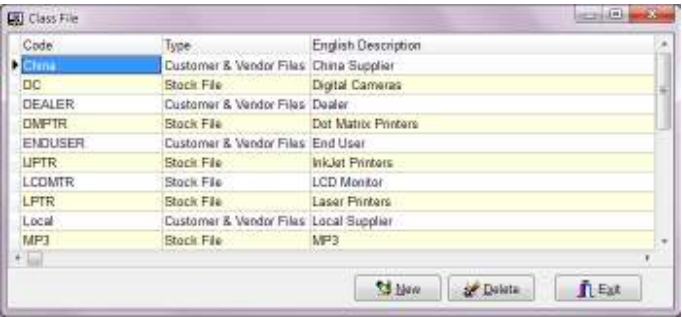

Figure 3-14 Class File

3.11 Customer File (GAS, GIS & GOS)

This file is to keep basic information for all customers. User can input the information directly or copy from other customers. To copy an existing customer’s record, please add a new customer profile firstly. And then, key in the new customer code and press the button beside the field of Customer Code to choose a desired customer to copy.

3.11.1 Information Input

The interface for Customers File divides into: contact information, selling information, contact history, transaction and remark.

Contact Information:

Customer Code This field is up to 20 digits or characters. Under Insert mode, customer code can be altered. After the customer's record saved, this field cannot be altered.

The button beside this field is for searching. Under Browse mode, press this button to call for dialog box for searching.

To be better management, it should be added an appropriate character in front of digit. For example, if a company's short name is CA, customer code should be CA001. The next one will be CA002.

Figure 3-15 Customer's Contact information

Currency The currency used by this customer. This currency will be automatically filled in all transactions and can be altered.

Active Please cancel '✓' in this field if the customer had been terminated. After that, no any invoices can be issued to this customer. However, this customer should not be deleted before Year End since this customer may have linkage with other transactions, e.g. invoices.

Vendor	Please mark '✓' if this customer is also a supplier.
Dealer	Please mark '✓' if this customer is also a dealer.
English Company Name	It is customer's company name in English with maximum 60 characters.
English Bill Address	Three lines with maximum 60 characters each are available.
Chinese Company Name	It is customer's company name in Chinese with maximum 60 characters.
Chinese Bill Address	Three lines with maximum 60 characters each are available.
City/State/Country/Post Code	User can key in relevant information in these fields.
Class	It is to record the classification of customers.
Main Contact	
Contact Person	The name of main contact person of this company.
Direct Line	Telephone number for the main contact person.
Tel No	Telephone number of the company.
Fax No	Fax number of the company.
A/C Contact	
Contact Person	The name of contact person of accounting department.
Direct Line	Tel. No. for the contact person of accounting department.
Tel No	Tel. No. of accounting department.
Fax No	Fax number of accounting department.
Sales Contact	
Contact Person	The name of contact person of sales department.
Direct Line	Tel. No. for the contact person of sales department.
Tel No	Tel. No. of sales department.
Fax No	Fax number of sales department.
E-mail	E-mail address for company or main contact person. For example, our company's customer support E-mail address is: <u>support@gtcl.com.hk</u> .
Web Site	It is to record customer's company web site. Our company's web site is <u>http://www.gtcl.com.hk</u> .
Selling Information	

- Payment Term** To record the payment terms of a customer. The due date will be automatically calculated when an invoice issued. Of course, the due date can be altered when an invoice issued.
- Payment Method** The payment method is usually used by the customer. It will automatically be filled in when an invoice issued and can be altered.
- Stock Price Group** It is for user to select the price group applied to this customer.
- Credit Status** To classify the credit status of a customer.
- A/R Account** User can set different A/R accounts to different customers. Only the account with A/R category in Chart of Accounts will be displayed here.
- Salesman** The responsible staff to this customer and will be filled in Sold By field of invoice by the Application automatically.

Figure 3-16 Customer's selling information

- Ship To** Default address for delivery. It can be same as this customer or different.
To do that, user should input this delivery address in the field of bill address in Customer file under same customer name with different customer code. Thus, you can issue the invoice to delivery address directly and with many addresses for delivery.
- Ship Via** Default delivery method for a customer.

District	The location of a customer.
Referee	The referee of a customer.
Industry	The industry of a customer.
Bank A/C No	Customer's main banker account number.
Dealer Code	The Code for dealers. User can select a desired dealer code just by pressing the button with triangle.
Commission Rate	Commission rate for the dealer.
Closing Date	The date for calculating the payment date. It divides into three types: invoice date, 15 th date of each month, and End date of each month. The date is the payment date for each invoice, matched with payment terms. For example, if the payment term is 15 days credit, the payment date will be invoice date plus 15 days based on invoice date, or the next fifteenth date plus 15 days based on 15 th date of each month, or the date at month end plus 15 days based on End date of each month.
Sales Discount	This figure will be automatically filled in the field of Total Discount 1 in a sales invoice.
Credit Limit	It is the maximum credit limit for a customer. When A/R is greater than credit limit, the Application will reject to issue an invoice to this customer or to give warning signal according to different authorize level.
Opening Balance	The opening balance for this financial year is automatically brought from previous financial year by GTC applications. If you are first time to use GTC applications, please refer to [Opening Balance Setup].
Current Balance	Total amounts due from this customer including opening balance.
Tax ID No	Customer's Tax ID No.
Taxable	If the sales tax is paid by the customer, please mark '✓' in this field.

Contact History

This page is to record all contact information related to a customer. 15 months' contact information is shown (one year before the current day and 90 days after the current day). The date range can be set by the user.

To view or edit the information, please use mouse to double click the field of content.

Figure 3-17 Customers' Contact History

Transaction

All invoices with outstanding balance related to this customer will be displayed for browsing purpose.

Figure 3-18 Customers' outstanding invoices

Remark

Remark It is for user to input the supplementary information for a customer.

Figure 3-19 Customers' Remark page

Billing Reminder The information will be automatically filled in the remark field of a sales invoice.

Create Date This field will be automatically filled in as current date. To alter, just by input directly or use the mouse to double click the button with triangle in this field to call a calendar for choosing the desired date.

3.11.2 Opening Balance Setup

The opening balance is not just a number. It should include the content of an invoice: invoice number, invoice date, invoice amount and paid amount. The user should input all unpaid invoices when it is first time to GTC system. To save the time, user can group all unpaid invoices into one. For example, if there are ten unpaid invoices totally amounted \$10,000. It can be represented by one invoice: BSI07001 amounted \$10,000. Under Insert or Edit mode, press [Insert] button of the keyboard or double click this field by mouse to call the screen of Figure 3-20.

Invoice Type It divides into Sales Invoice and Vendor Invoice.

Invoice Number It contains 20 digits or characters. It must be unique.

Invoice Date	Invoice date is the date to issue an invoice.
Due Date	It is the payment date for an invoice. It will influence the result of aging analysis.
Currency	The currency used in the invoice.
Rate	It is the exchange rate between the selected currency and local currency. To change it just by input the new rate directly. To change the exchange rate permanently, please go to Currency File.
Salesman	The salesman is responsible for this invoice. User can select the desired one just by pressing the downward arrow.
Salesman Comm. Rate	Commission rate for dealers.
Dealer Code	The Code for dealers. User can select the desired one just by pressing the downward arrow.
Dealer Comm. Rate	Commission rate for dealers.
Invoice Amount	Total invoice amount exclusive discount amount.
Paid	The amount has been paid.
Balance	Total invoice amount minus paid amount. It is automatically calculated the Application.

Figure 3-20 Customers' Opening Balance Setup

3.12 Vendor File

This file is to keep basic information for all vendors. User can input the information directly or copy from other vendors. To copy an existing vendor's record, please add a new vendor profile firstly. And then, key in the new vendor code and press the button just beside the field of Vendor Code to choose a desired vendor to copy.

3.12.1 Information input

Vendor File’s interface divides into three parts: contact information, purchase information, contact history, transaction and remark.

Vendor Code This field is up to 20 digits or characters. Under Insert mode, vendor code can be altered. After the vendor’s record saved, this field cannot be altered.
The button beside this field is for searching. Under Browse mode, press this button to call for dialog box for searching.

To be better management, it should be added an appropriate character in front of digit. For example, if a company's short name is VA, vendor code should be VA001. The next one will be VA002.

Currency The currency used by this vendor. This currency will be automatically filled in all transactions and can be altered.

Active Please cancel ‘✓’ in this field if the vendor had been terminated. After that, no any invoices can be issued to this vendor. However, this vendor should not be deleted before Year End since this vendor may have linkage with other transactions, e.g. invoices.

Figure 3-21 Vendors’ Contact information

Customer Please mark ‘✓’ if this vendor is also your customer.

- Dealer Please mark '✓' if this vendor is also a dealer.
- English Company Name It is vendor's company name in English with maximum 60 characters.
- English Bill Address Three lines with maximum 60 characters each are available.
- Chinese Company Name It is vendor's company name in Chinese with maximum 60 characters.
- Chinese Bill Address Three lines with maximum 60 characters each are available.
- City/State/Country/Post Code
User can key in relevant information in these fields.
- Class It is to record the classification of vendors.
- Main Contact
- | | |
|----------------|--|
| Contact Person | The name of main contact person of this company. |
| Direct Line | Telephone number for the main contact person. |
| Tel No | Telephone number of the company. |
| Fax No | Fax number of the company. |
- A/C Contact
- | | |
|----------------|---|
| Contact Person | The name of contact person of accounting department. |
| Direct Line | Tel. No. for the contact person of accounting department. |
| Tel No | Tel. No. of accounting department. |
| Fax No | Fax number of accounting department. |
- E-mail E-mail address for company or contact person. For example, our company's customer support E-mail address is: support@gtcl.com.hk.
- Web Site It is to record vendor's company web site. Our company's web site is <http://www.gtcl.com.hk>.
- Purchase Information
- Payment Term The credit days are granted from vendor. It will be automatically filled in when a vendor invoice issued. It can be altered.
- Payment Method The payment method is usually used by the vendor. It will automatically be filled in when an invoice issued and can be altered.

Figure 3-22 Vendors' purchase information

- Credit Status** To classify the credit status of a vendor.
- A/P Account** User can set different A/P accounts to different vendors. Only the account with A/P category in Chart of Accounts will be displayed here.
- Staff** The responsible staff to this vendor and will be filled in Prepared By field of invoice by the Application automatically.
- Ship Via** Default delivery method for a vendor.
- Bank A/C No** Vendor's main banker account number.
- Closing Date** The date for calculating the payment date. It divides into three types: invoice date, 15th date of each month, and End date of each month. The date is the payment date for each invoice, matched with payment terms. For example, if the payment term is 15 days credit, the payment date will be invoice date plus 15 days based on invoice date, or the next fifteenth date plus 15 days based on 15th date of each month, or the date at month end plus 15 days based on End date of each month.
- Purchase Discount** This figure will be automatically filled in the field of Total Discount 1 in a vendor invoice.

Credit Limit It is the maximum credit limit from a vendor. When A/P is greater than credit limit, the Application will reject to issue an invoice to this vendor or to give warning signal according to different authorize level.

Opening Balance The opening balance for this financial year is automatically brought from previous financial year by GTC applications. If you are first time to use GTC applications, please refer to [Opening Balance Setup].

Current Balance Total amounts due to this vendor including opening balance.

Tax ID No Vendor's Tax ID No.

Taxable If the purchase tax is paid by the vendor, please mark '✓' in this field.

Contact History

This page is to record all contact information related to a vendor. 15 months' contact information is shown (one year before the current day and 90 days after the current day).

To view or edit the information, please use mouse to double click the field of content.

Balance Total invoice amount minus paid amount. It is automatically calculated the Application.

Figure 3-26 Opening Balance Setup

3.13 Stock File (GIS, GOS & GRS)

The file is to keep the information for stocks. The content can be input by the user or copied from other stock file. To copy the content of other stock file, user should add a new stock file firstly. And then, input stock code and press the button beside Stock Code to choose the file to copy.

The interface for Stock File divides into Basic Information, Sales Information, Purchase Information, Quantity of Warehouse (Enhanced Edition only), Remark and Product Image.

Basic Information

Stock Code This field is up to 30 digits or characters. Under Insert mode, stock code can be altered. After the stock information saved, this field cannot be altered.

To be better management, stock code should be easy to memory. Bar code should not be used as stock code.

The button besides this field can be used for searching under browse mode or for copying an existing record under edit mode.

Create Date This field will be automatically filled in as current date. To alter, just by input directly or use the mouse to double click the button with triangle in this field to call a calendar to choose a desired date.

Stock Type It divides into Product, Service, WIP, Raw Material and Other.

The screenshot shows the 'Stock File' window with the 'Basic Information' tab selected. The form contains the following fields and values:

Basic Information		Sales Information	Purchase Information	Qty of Warehouse
Stock Code	EDC002	Create Date	11/4/2001	Stock Type
English Stock Name	Digital Camera EPSON PhotoPC 850z			Product
Chinese Stock Name	數碼相機 EPSON PhotoPC 850z			Active
Color		Size		Packing
Class	DC	Brand	EPSON	Bill of Material Code
Gross Weight	0.00	Net Weight	0.00	Unit
Length	0.00	Width	0.00	Height
Large Unit(E/C)		Small Unit(E/C)		Each
Reorder Qty	5	Sales Order Qty	0	Put Order Qty
		Opening Stock	0	Stock On Hand
			3	3

Figure 3-27 Stock's basic information

Active	Please cancel '✓' in this field if one stock had been stopped to sell. However, this record should not be deleted before Year End since this record may have linkage with other transactions, e.g. sales invoices or vendor invoices.
English Stock Name	Detail description of a stock in English with maximum 60 characters.
Chinese Stock Name	It is detail description of a stock in Chinese with maximum 60 characters.
Color	Stock's color.
Size	Stock's size.
Packing	Stock's packing e.g. 32X45X88 etc.
Class	It is the classification of a stock. It is useful for sales analysis, purchase analysis and searching purpose.
Brand	It is the classification of a stock. It is useful for sales analysis, purchase analysis and searching purpose.
Bill of Material Code	The number of Bill of Material.
Gross Weight	Stock's weight including package.
Net Weight	Stock's net weight.

Bar Code Type	There are six types: Code 128, Code 39, EAN-13, Interleaved 2 of 5, Postnet and UPC-A.
Bar Code	The content for a bar code, e.g. 4899628434108 etc.
Length/Width/Height	Please fill in the relative figures for a stock's length/width/height. These figures are used for the calculation of CBM. The measurement unit divides into CM, M and Inch. It can be selected in System Setup.
Dimension Description	It is for user to describe the volume of a stock, e.g. 20x30x50cm.
Large Unit (E/C)	Stock's large package e.g. box, tone, etc. It can be empty if not applicable.
Small Unit (E/C)	Stock's small package, e.g. piece, kg, etc. E stands for unit name in English whilst C stands for unit name in Chinese. Please input the English unit name and Chinese unit name in relevant field. English unit name will be used under English interface input. Chinese unit name will be used under Chinese interface input.
Each...has...	If there is large unit, this field is the quantities of small unit for each large unit. It must be greater than 0. Default value is 1.
Reorder Quantity	It is calculated based on small unit. When the quantity is lower than reorder quantity, the Application will give warning. Since it takes time to purchase goods from vendor and sell goods in between, you should keep a certain level of stock. Otherwise, it may be out of stock if too little stock kept or to waste warehouse and money if too much stock kept.
Sales Order Qty	The outstanding S/O quantities.
Pur Order Qty	The outstanding P/O quantities.
Opening Stock	Please input the balanced quantities of a stock in Opening Stock if you are first time to the Application. For Enhanced Edition, the quantities of different warehouses should also be input in Qty of Warehouse page (Figure 3-30).

The quantities input in Opening Stock is the total quantities of all warehouses and calculated based on small unit.

Stock On Hand Current stock quantities calculated based on small unit. This field is automatically calculated by the Application.

Sales Information

Currency The currency of a stock divides into two parts: local currency and foreign currency. User can set the default foreign currency here for each stock. The unit price of foreign currency will be used directly when the currency in sales transaction entry is same. User can select a desired currency and input the unit price of foreign currency in relevant fields. The Application will convert the unit price of foreign currency into local currency automatically. The unit price of local currency can be altered by the user.

Large Unit Price It is standard selling price for a large unit.

Small Unit Price It is standard selling price for a small unit.

Maximum Price It is maximum selling price for a small unit.

Minimum Price It is minimum selling price for a small unit.

Selling Price Quantity Discount Rate

The Application supports up to 4 levels accumulated discounts for each stock. User can input either discount rate or discount unit price for a stock. For example, 2% off for over 10 pieces, 5% off for over 20 pieces, 10% off for over 50 pieces, 15% off for over 100 pieces, or discount unit price at \$10 for over 10 pieces, \$9 for over 20 pieces, \$7 for over 50 pieces, \$5 for over 100 pieces

Note: 1. If this quantity discount rate has been input in the Stock File, last selling price will not be displayed when an invoice issued.

Note: 2. Discount rate will be applied by the Application if both discount rate and discount unit price are input.

Qty 1 Disc. 1 First quantity discount.

Qty 2 Disc. 2 Second quantity discount.

Qty 3 Disc. 3 Third quantity discount.

Qty 4 Disc. 4 Fourth quantity discount.

Taxable If there is a sales tax on this stock, please mark ‘✓’.

3.17 User Security

User Security is to control the authority to each user for each function. Each function for each user can be restricted to Read, New, Edit or Delete.

3.17.1 Log On

To enter into the Application, User ID and Password must key in on Log On interface. Default user name and password is SUPERVISOR and PASSWORD respectively. SUPERVISOR is a user with the highest authority and it cannot be deleted. It is highly recommended to change the password of SUPERVISOR.

To change password, please tick [Change Password] on Log On interface. Change Password interface will be shown after you have successfully log on. Old password should be key in the field of Old Password. New password should be key in the field of New Password and Verify.

Figure 3-35 Log On

3.17.2 Add or Delete a user

To execute User Security and press [New User] button, new user name and password are requested to input. After that, all functions are shown. If the user is allowed perform the function, please use the mouse to double click the functions.

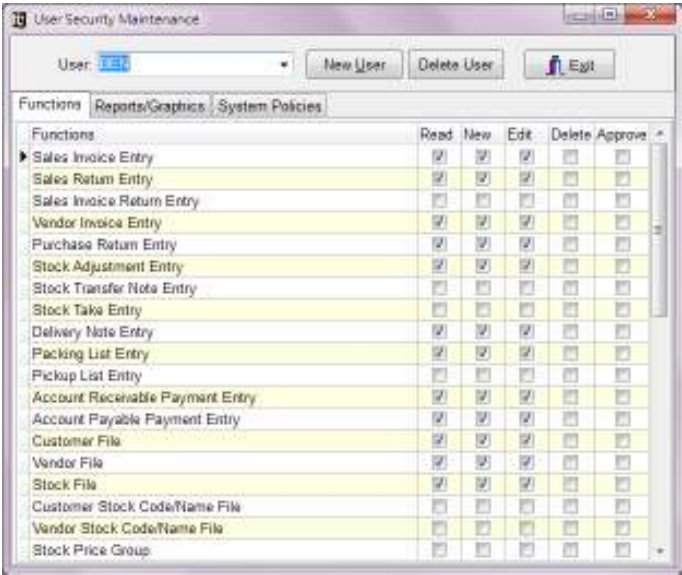

Figure 3-36 User Security Maintenance

Read To allow user enter into or execute a specific function.

New To allow user insert a new record.

Edit To allow user edit the existing record.

Delete To allow user delete the existing record.

To delete an existing user, please use the mouse to choose the desired one by pressing downward arrow beside user name and press [Delete User] button.

Note: SUPERVISOR and the user executing the Application cannot be deleted.

3.18 System Setup

System Setup is designed for simplification of operation.

3.18.1.1 General - Printing

Print after Save The Application will automatically check this setting after each transaction (e.g. Sales Invoice) saved. If there is '✓' in this field, printing action will be automatically executed. If there is no '✓' in this field, [Ask before Printing] and [Show Print Dialog] will not display.

Figure 3-37 System Setup (General)

Ask before Printing

The Application will automatically check this setting when printing action executed. If there is '✓' in this field, the print dialog will be displayed for user to choose print or not. If there is no '✓' in this field, printing action will be automatically executed.

Show Print Dialog

If there is '✓' in this field, The Application will display Print Dialog Box before printing. User can change the printer setting in here.

Default Format This format is usually used to print out.

Paper Size This paper size is used to print. User can change the paper size temporarily in Print Dialog box. If user has modified the report format, the paper size cannot be changed in here.

3.18.1.2 General - Export

Default Directory The directory for the Application to save the export data. If it is blank, default directory will be the sub-directory of data directory. For example, if the data directory is c:\gtc\gbs50p\data (Professional Edition) or c:\gtc\gbs50i\data (Enhanced Edition) and the current date is 10, the default target directory will be c:\gtc\gbs50p\data\10 (Professional Edition) or c:\gtc\gbs50i\data\10 (Enhanced Edition).

Note: The user must have the security permission of data folder for Read, Write, Add and Delete.

Default Host E-Mail The e-mail address is usually to be used for export. This e-mail address will be automatically filled in the field of Host E-Mail in the function of [Export Data from System].

Last Export Date The Application will automatically update the last export date in this field. This information will be used as the beginning date in the next export data.

3.18.1.3 General – Warning Options

Three warning options, Prohibit, Warning and Ignore can be selected. If [Prohibit] is selected, the designated action will be rejected by the Application exclusive the authorized user. If [Warning] is selected, a warning message will be shown for the user to confirm the designated action. If [Ignore] is selected, no any checking will be conducted for the designated action by the Application.

Customer over Credit Limit

[Prohibit] and [Warning] are selected, the Application will check whether the customer's outstanding balance is over the customer's credit limit. The unauthorized user can't save this record whilst a warning message will be shown for the authorized user to confirm this record.

[Ignore] is selected, the Application will not conduct the comparison.

Over Vendor Credit Limit

[Prohibit] and [Warning] are selected, the Application will check whether the vendor's outstanding balance is over the vendor's credit limit. The unauthorized user can't save this record whilst a warning message will be shown for the authorized user to confirm this record.

[Ignore] is selected, the Application will not conduct the comparison.

Over Maximum Selling Price

[Prohibit] and [Warning] are selected, the Application will check whether the unit price is over the maximum price set in Stock File. The unauthorized user can't save this record whilst a warning message will be shown for the authorized user to confirm this record.

[Ignore] is selected, the Application will not conduct the comparison.

Over minimum Selling Price

[Prohibit] and [Warning] are selected, the Application will check whether the unit price is over the minimum price set in Stock File. The unauthorized user can't save this record whilst a warning message will be shown for the authorized user to confirm this record.

[Ignore] is selected, the Application will not conduct the comparison.

Over Reorder Quantity

[Prohibit] and [Warning] are selected, the Application will check whether the quantities are over the reorder quantity set in Stock File. The unauthorized user can't save this record whilst a warning message will be shown for the authorized user to confirm this record.

[Ignore] is selected, the Application will not conduct the comparison.

3.18.1.4 General – Others

Stock Sales Costing Method

There are three types of costing method, Average Cost, Standard Cost and Last Purchase Price, for user's selection. The gross profit for each sales transaction will be affected directly due to different costing method. Authorized user can modify the cost of a stock in sales transaction.

Enable User Log

Please mark '✓' to enable the function of User Log. After that, any functions executed by any users will be recorded by the Applications. The information including User Name, Function, Access Time, Action, Result, Station and Record Number will be recorded and displayed.

Since the records for User Log take up much space, please execute [Delete] function in User Log Control interface within certain period.

Create General Ledger Transaction

The Application supports whether generate GL transactions from other modules. Please cancel '✓' if no GL transactions to be generated. If the situation changed, GL transactions can be generated just by marking '✓' in this field and executing Transaction Auditor with '✓' in the field of Rebuild Transactions.

Note: Incomplete accounting information will be happened if this function be cancelled. Please take a full consideration before cancel this function.

Measurement Unit The unit uses to measure stock's length, width and height. It will be used in Stock File and in the calculation of volume (CBM/CTF).

Measurement Type Two choices, CBM or CTF, are available.

Show Last Record in Transaction

Please mark '✓' to enable this function. The last record will be shown in transaction entries. Otherwise, the first record will be shown. Please note that it will take more time to loan the data if this function is enable with large volume data.

3.18.2.1 Search Methods - Sales Entry Interface

Search Customer by Bar Code

If this field be selected, the Application will execute the search action until the user input search criteria and press [Enter] in Customer Code field of Sales Entry Interface. There are hints if no matched records found.

Search Stock by Bar Code

If this field be selected, the Application will execute the search action until the user input search criteria and press [Enter] in Stock Code field of Sales Entry Interface. There are hints if no matched records found.

Search Customer by

The Application uses incremental searching method. User can set the default field for searching the customer via customer code, customer name or telephone number.

Multi Stock Selection

User can select more than one stock in incremental searching lookup box. When set to True this property allows the ability to select multiple contiguous records with the mouse while the [Shift] key is pressed and to select multiple records one by one with the mouse while the [Ctrl] key is pressed. The selected

stocks will be added to the current transaction by selecting order. The default quantity is 1. The Retail Price will be used as the unit price.

Figure 3-38 System Setup (Search Methods/Display Format)

Update Customer/Stock Last Price

User can decide to update Customer/Stock Last Price by the Application or not. Please mark '✓' to enable this function. The Application will not update the Customer/Stock Last Price after a quotation, a sales order or a sales invoice is issued. User can update the price in Customer/Stock Last Price File.

Search by Client's Stock Code

User can search the stock by client's stock code. Please mark '✓' to enable this function. User should set up the information in [Customer Stock Code/Name File].

Stock Browse Order

There are 4 options, Last Selected Order, Stock Code, English Stock Name and Chinese Stock Name. The setting here will be used for searching a stock in all sales transactions.

3.18.2.2 Search Methods - Purchase Entry Interface

Search Vendor by Bar Code

If this field be selected, the Application will execute the search action until the user input search criteria and press [Enter] in Vendor Code field of Purchase Entry Interface. There are hints if no matched records found.

Search Stock by Bar Code

If this field be selected, the Application will execute the search action until the user input search criteria and press [Enter] in Stock Code field of Purchase Entry Interface. There are hints if no matched records found.

Search Vendor by

The Application uses incremental searching method. User can set the default field for searching the vendor via vendor code, vendor name or telephone number.

Multi Stock Selection

User can select more than one stock in incremental searching lookup box. When set to True this property allows the ability to select multiple contiguous records with the mouse while the [Shift] key is pressed and to select multiple records one by one with the mouse while the [Ctrl] key is pressed. The selected stocks will be added to the current transaction by selecting order. The default quantity is 1. The Last Purchase Price or Standard Price by order will be used as the unit price.

Update Vendor/Stock Last Price

User can decide to update Vendor/Stock Last Price by the Application or not. Please mark '✓' to enable this function. The Application will not update the Vendor/Stock Last Price after a purchase order or a vendor invoice is issued. User can update the price in Vendor/Stock Last Price File.

Search by Vendor's Stock Code

User can search the stock by vendor's stock code. Please mark '✓' to enable this function. User should set up the information in [Vendor Stock Code/Name File].

Stock Browse Order

There are 4 options, Last Selected Order, Stock Code, English Stock Name and Chinese Stock Name. The setting here will be used for searching a stock in all sales transactions.

3.18.2.3 Display Format

Stock Unit Price Default decimal point for stock unit price is 2. User can set decimal point, maximum to 4 points, for stock unit price. Please select the desired one by pressing the downward arrow.

Stock Quantity Default decimal point for stock quantity is 0. User can set decimal point, maximum to 5 points, for stock quantity. Please select the desired one by pressing the downward arrow.

Display Format The format is same as the format of MS Windows. Please refer to the following:

- a) #: If the value being formatted has a digit in the position where the "#" appears in the format string, then that digit is copied to the output string. Otherwise, nothing is stored in that position in the output string.
- b) 0: If the value being formatted has a digit in the position where the "0" appears in the format string, then that digit is copied to the output string. Otherwise, a "0" is stored in that position in the output string.
- c) “,”: “,” is thousand separator. If the format string contains one or more “,” characters, the output will have thousand separators inserted between each group of three digits to the left of the decimal point. The actual character used as a the thousand separator in the output is determined by the Thousand Separator global variable. The default value of Thousand Separator is specified in the Number Format of the Regional Settings section in the Windows Control Panel.
- d) “.”: “.” is decimal point. The first “.” character in the format string determines the location of the decimal separator in the formatted value; any additional "." characters are ignored. The actual character used as a decimal separator in the output string is determined by the DecimalSeparator global variable. The default value of DecimalSeparator is specified in the Number Format of the Regional Settings section in the Windows Control Panel.
- e) To allow different formats for positive and negative values, the format string can contain two sections separated by semicolons. The first section applies to positive values and the second section applies to negative values. For example, the format string of #,0.00; (#,0.00) will display the value of 1234.56 as 1,234.56 for positive value and (1,234.56) for negative value.

- f) The following table shows the effect of various format strings:

Format String	Value	Display Format
#,0.00	1234.5670	1,234.57
#,0	1234.56700	1,235
#,0.####	1234.5670	1,234.567

Note: The format string only affects the display format. The calculation of the Applications will base on the value entered. For example, the display format for the value of 1234.567 will be 1,234.57 if the format

string is #.0.00. However, the calculation of the Applications will base on 1234.567.

3.18.2.4 Delete the setting of user interface

Delete User Interface Size Setting

The size of the user interface will be automatically recorded and used in next time. To return to the original size, press [Delete User Interface Size Setting].

Delete Grid Column Setting

The size and order of a grid (e.g. items of Sales Invoice Entry) will be automatically recorded and used in next time. To return to the original setting, press [Delete Grid Column Setting].

3.18.3 FTP Server

The Application supports the data exchange for different locations via FTP (File Transfer Protocol) server. User can set up the settings to upload the data exported from the Application or download the data imported to the Application.

Before set up the settings, please collect the following information:

- FTP Server Address: it can be URL or IP address.
- User name and password of FTP Server
- Upload / Download Folder
- The user of FTP Server must have the authority to create and delete in the folder.

Figure 3-39 System Setup (FTP Server)

3.18.4 Sales Memo Setup

This page will be displayed only when GTC Retailing System installed.

- Store/Warehouse
(Enhanced Edition only)

The code for this store or warehouse.
- Till I.D.

I. D. code for this stand.
- Default Salesman

The salesman usually responses to issue Sales Memo and will be filled in Salesman field by the System automatically.
- Max Line Discount

The maximum discount rate for each item.
- Max Total Discount

The maximum discount rate for a Sales Memo.
- Default Total Discount

The total discount rate for each Sales Memo will be filled in Total Discount Rate field by the System automatically. This rate must be lower than Max Total Discount.
- Cash A/C Code

When there is a cash payment in a Sales Memo, the amount of cash payment will be posted to this A/C by the System automatically.

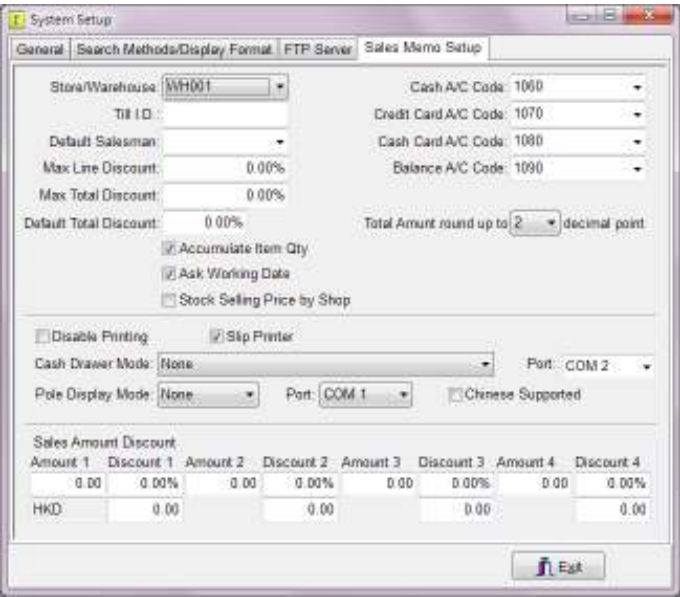

Figure 3-40 System Setup (Sales Memo Setup)

3.25.1 Credit Status File

It is to record different types of credit status. It can contain 40 characters.

3.25.2 Ship Via File

It is to record different types of delivery methods. It can contain 40 characters.

3.25.3 District File

It is to record different sales districts. It can contain 40 characters.

3.25.4 Unit of Measure File

It is to record different types of unit for stocks or weights. It can contain 8 characters.

Figure 3-50 Credit Status File

3.25.5 Customer Stock Code/Name

It is for user to set up the stock code and name for the customers. The Application supports to input customer's stock code in sales transaction entries, such as Quotation Entry, Sales Order Entry and Sales Invoice Entry. Please mark '✓' to enable the function of Search Client's Stock Code in [System Setup].

3.25.6 Vendor Stock Code/Name

It is for user to set up the stock code and name for the vendors. The Application supports to input vendor's stock code in purchase transaction entries, such as Purchase Order Entry and Vendor Invoice Entry. Please mark '✓' to enable the function of Search Vendor's Stock Code in [System Setup].

Chapter 4 Transfer Voucher Entry (GAS)

Under main menu, use the mouse to choose Transfer Voucher Entry or press [Alt-S]+T to Transfer Voucher Entry interface. The interface divides into three parts: header, details and footer.

4.1 Header

Header includes major content of a transfer voucher, e.g. Voucher No., Date, Period, Ref No and Remark.

Voucher No. Voucher number contains 20 digits or characters and is automatically incremental. The Application will firstly read the digit part of Voucher Number in [System Number] to check whether the number was used. If not, this number will be used as an Invoice Number. Otherwise, the Application will add one to this number.

Note: Voucher Number should be unique to other System Number. To change Voucher Number for next voucher, you should go to [System Numbers File] under Maintenance menu.

Date This field is the date to issue a voucher and will be automatically filled in as current date. To amend, just by input directly or use the mouse to double click the button with triangle in this field to call a calendar to choose a desired date. The format is according to the date format of MS Windows. To change the format, please go to Control panel of MS Windows.

The screenshot displays the 'Transfer Voucher Entry' window. The header section includes fields for Voucher No. (G4219), Date (21/1/2012), Period (+ 20/001), and Ref. No. A Remark field is also present. The details section is a table with columns: Account Code, Description, Currency Rate, Debit, and Credit. The footer section shows a balance of 3,300.00 and a modified date of 5/12/2012 17:53:10 by SUPERVISOR.

Account Code	Description	Currency Rate	Debit	Credit
6500	Telecommunication	HKD	1.8506	308.08

Ship Via

To record the delivery method for the goods.

10.1.2 Detail

Each invoice can contain many items including service items or remarks input by the user. It includes Item, Stock Code, Description, Quantity, Unit Price, Discount, and Amount.

Item

It is to input the number for each item or other information.

Stock Code

User can input the code directly or press the button beside the field to select the existing records.

Description

Stock name is automatically filled in when Stock Code has been selected. User can modify stock name directly. However, the modified stock name is just for this record. For non-stock item input, user can input the name in here.

Quantity

The interface for input quantity will automatically displayed when the cursor moved to this field. Both large unit quantity and small unit quantity will be displayed in Quantity field if the stock has large unit and small unit. Otherwise, only small unit quantity field will be displayed for user input. The unit for large unit or small unit can be altered here.

Small unit price will be filled in the field of unit price if only small unit quantity input. Otherwise, large unit price will be filled.

Unit Price

The Application will check whether the stock has been sold. If yes, last selling price and standard unit price will be displayed. Please choose the desired one. Whatever you chose, this price will be the last selling price for next sales.

Discount

This discount is defaulted as percentage. Thus, please just input the digit.

Amount

This amount is automatically calculated by the Application. User cannot amend. It equals to Quantity times Unit Price minus Discount.

Item Remark

Press [F5] in Detail section of an invoice to call an interface to input detail information for a stock or an item. The information includes Stock Unit Cost Price, Order No. and detail remark. The information can't be edited under [Browse] mode. The authority to browse or edit Stock Unit Cost Price can be set in [User Security Maintenance].

Delete an item Press [Ctrl-Del] to delete an item at cursor position.

10.1.3 Footer

Footer includes Tax 1 & 2, Total Discount 1 & 2, Freight Charge, Other Charge, Deposit and Balance.

Tax 1 & 2 Sales Tax is automatically calculated by the Application based on default formula set by user. Please refer to Tax File.

Chapter 11 Sales Return Entry (GIS)

Under main menu, use the mouse to choose Sales Return Entry or press [Alt-S]+R to Sales Return Entry interface. The interface divides into three pages: Main, Delivery Information and Remark.

11.1 Main

Main page includes three parts: header, detail and footer.

11.1.1 Header

Header includes major content of a Sales Return. Most of the contents can be selected from the existing files. If no suitable record can be selected or to input a new record, user can call the interface of maintenance files to add a new record by pressing [F6] on the appropriate fields, such as Customer Code, Currency or Sold By, etc. To close the interface just by pressing Exit and the current record will be copied to Sales Return.

Field description:

Invoice No. Invoice number contains 20 digits or characters and is automatically incremental. The Application will firstly read the digit part of Invoice Number in [System Number] to check whether the number was used. If not, this number will be used as an Invoice Number. Otherwise, the Application will add one to this number.

Note: Invoice Number should be unique to other System Number. To change next Invoice Number, you should go to [System Numbers File] under Maintenance menu.

Date This field is the date to issue an invoice and will be automatically filled in as current date. To amend, just by input directly or use the mouse to double click the button with triangle in this field to call a calendar to choose a desired date. The format is according to the date format of MS Windows. To change the format, please go to Control panel of MS Windows.

Customer Code Press the button beside the field by the mouse to call dialog box for searching via customer code, customer name or telephone number.

Contact Contact person for this company.

Currency The currency will be filled as the selected customer's default currency. It can be altered. If the currency changed, the exchange rate will be changed respectively.

Rate	It is the exchange rate between the selected currency and local currency. To change it just by input the new rate directly. To change the exchange rate permanently, please go to Currency File.
Ref No	It is for user to input supplementary information. It can be customer's sales order number or company's purchase order number.
P. O. No.	It is customer's purchase order number.
Warehouse (Enhanced Edition only)	If the warehouse be selected, the Application will add the quantities of the stocks to this warehouse.
Sold by	It is to record the salesman responsible to this Invoice. The information is for the analysis of salesman's performance and calculation of commission.
Payment Terms	It is the credit days for the customer. The Application will calculate the payment date based on this credit days and customer's closing date (please refer to Payment Terms File and Customer File). If this field is blank, the payment date will be same as invoice date.
Payment Method	It is to record the method of payment. If there is a deposit amount input, the account related to the selected Payment Method will be used to debit. If there is no an account code marked in the selected Payment Method, this deposit amount will be debited to the Sales Deposit account marked in [Control Accounts].
Job Code (Enhanced Edition only)	Please select a job code for this transaction, if applicable.
Ship Via	To record the delivery method for the goods.

11.1.2 Detail

Each invoice can contain many items including service items or remarks input by the user. It includes Item, Stock Code, Description, Quantity, Unit Price, Discount, and Amount.

Item	It is to input the number for each item or other information.
Stock Code	User can input the code directly or press the button beside the field to select the desired one from the existing records.
Description	Stock name is automatically filled in when Stock Code has been selected. User can modify stock name directly. However, the

modified stock name is just for this record. For non-stock item input, user can input the name in here.

The screenshot shows the 'Sales Return Entry' window. At the top, it displays 'Invoice No.: 10001' and 'Date: 01/01/2012'. Below this, the 'Customer Info' section includes 'Customer Code: 10001', 'Customer Name: Qing Mei Industrial Works', 'Address: 18/F., Hong To Industrial Building', '88 Hang To Road, Hsiao Tung', 'Kaohsiung, Hsiao Tung', 'Contact: Mr. Chai Wei Lam', and 'Tel No.: 2345678'. The 'Payment Terms' are set to 'C.O.D.' and 'Payment Method' is 'Cash'. The 'Job Code' and 'Enter No.' fields are empty. The 'Warehouse' is set to 'WH01'. The 'Item' table lists two items: 'SD0001' (Digital Camera EPSON Photo-PC 3000) and 'SD0002' (Digital Camera EPSON Photo-PC 800). The summary section at the bottom shows 'Tax 1: 0.60%', 'Tax 2: 0.60%', 'Total Dis. 1: 0.88%', 'Total Dis. 2: 0.88%', 'Freight Charge: 0.00', 'Deposit: 0.00', 'Others Charge: 0.00', and 'Balance: 11,700.00'.

Figure 11-1 Sales Return Entry

- Quantity** The interface for input quantity will automatically displayed when the cursor moved to this field. Both large unit quantity and small unit quantity will be displayed in Quantity field if the stock has large unit and small unit. Otherwise, only small unit quantity field will be displayed for user input. The unit for large unit or small unit can be altered here. Small unit price will be filled in the field of unit price if only small unit quantity input. Otherwise, large unit price will be filled.
- Unit Price** The Application will check whether the stock has been sold. If yes, last selling price and standard unit price will be displayed. Please choose the desired one. Whatever you chose, this price will be the last selling price for next sales.
- Discount** This discount is defaulted as percentage. Thus, please just input the digit.
- Amount** This amount is automatically calculated by the Application. User cannot amend. It equals to Quantity times Unit Price minus Discount.
- Item Remark** Press [F5] in Detail section of an invoice to call an interface to input detail information for a stock or an item. The information includes Stock Unit Cost Price, Order No. and detail remark. The information can't be edited under [Browse] mode. The authority to browse or edit Stock Unit Cost Price can be set in [User Security Maintenance].

Delete an item Press [Ctrl-Del] to delete an item at cursor position.

11.1.3 Footer

Footer includes Tax 1 & 2, Total Discount 1 & 2, Freight Charge, Other Charge, Deposit and Balance.

Tax 1 & 2 Sales tax is automatically calculated by the Application based on default formula set by user. Please refer to Tax File.

Multi-selection of unpaid invoices

- 1) Under Insert or Edit mode, press [F7] to select the invoices for settlement from all outstanding invoices of this vendor.
- 2) Press [Shift] to select multiple contiguous records with the mouse or press [Ctrl] to select multiple records one by one with the mouse.
- 3) Press [OK], the selected invoices will be added to this payment entry. The payment amount can be edited.

Cheque Returned

Under Browse mode, right click the mouse to choose [Cheque Returned]. After executed this function, reverse entries are added to the original voucher.

The status can be cancelled by right click the mouse to choose [Cancel Cheque Returned function]. After that, the reverse entries are cancelled. The status can't be cancelled if the invoices in this entry had been settled in another payment transaction and the payment amount exceeds the invoice's balance.

Chapter 23 Quotation Entry (GOS)

Under main menu, use the mouse to choose Quotation Entry or press [Alt-S]+Q to Quotation Entry interface. The interface divides into three pages: Main, Delivery Information and Remark.

23.1 Main

Main page includes three parts: header, details and footer.

23.1.1 Header

Header includes major content of a quotation. Most of the contents can be selected from the existing files. If no suitable record can be selected or to input a new record, user can call the interface of maintenance files to add a new record by pressing [F6] on the appropriate fields, such as Customer Code, Currency or Sold By, etc. To close the interface just by pressing Exit and the current record will be copied to this quotation.

Field description:

Quotation No	Quotation number contains 20 digits or characters and is automatically incremental. The Application will firstly read the digit part of Quotation Number in [System Number] to check whether the number was used. If not, this number will be used as a Quotation Number. Otherwise, the Application will add one to this number.
--------------	---

Note: Quotation Number should be unique to other System Number. To change next Quotation Number, you should go to [System Numbers File] under Maintenance menu.

Date	This field is the date to issue a quotation and will be automatically filled in as current date. To amend, just by input directly or use the mouse to double click the button with triangle in this field to call a calendar to choose a desired date. The format is according to the date format of MS Windows. To change the format, please go to Control panel of MS Windows.
------	--

Customer Code	Press the button beside the field by the mouse to call dialog box for searching via customer code, customer name or telephone number.
---------------	---

Contact	Contact person for this company.
---------	----------------------------------

Status	3 options, Active, Completed and Inactive, can be chosen. When Active be chosen, the prices will be updated to [Customer / Stock Last Price Table]. The quotations with Completed status won't be brought forward after Year End function executed.
--------	---

Currency The currency will be filled as the selected customer's default currency. It can be altered. If the currency changed, the exchange rate will be changed respectively.

The screenshot shows the 'Quotation Entry' window. At the top, it displays 'Quotation No.' as 1000 and 'Date' as 9/12/12. The status is 'Active'. Below this, there's a section for 'Customer Code' (10001) and 'Customer Name' (Ching Mei Hsin Works). The address is 'Room 3, 18F, Hong To Industrial Building, 88 Hong To Road, Kowloon, Hong Kong'. The contact is 'Mr. Chan Hui Lam' with 'Tel. No.' 2345678. The 'Currency' is 'USD' and the 'Rate' is '1.000'. The 'Ref. No.' is blank and the 'Warehouse' is 'WH01'. The 'Sold By' is 'Peter' and the 'Payment Terms' are 'C.O.D.'. The 'Payment Method' is 'Cash' and the 'Job Code' is blank. The 'Ship Via' is blank. Below this is a table of items:

Item	Stock Code	Stock Name/Description	Quantity	Unit Price	Discount	Amount
1	SDC003	Digital Camera EPSON PhotoPC 800	1	8,800.00	0.00%	8,800.00
2	SDC004	Digital Camera EPSON PhotoPC 650	1	2,400.00	0.00%	2,400.00
3	SDP001	Digital Printer EPSON LQ-380+	1	1,800.00	0.00%	1,800.00
4	SDP002	Digital Printer EPSON LQ-380+	1	1,800.00	0.00%	1,800.00

At the bottom, there's a summary section showing 'Tax 1: 0.00%', 'Tax 2: 0.00%', 'Total Dis. 1: 0.00%', 'Total Dis. 2: 0.00%', 'Freight Charge: 0.00', 'Others Charge: 0.00', and 'Balance: 5,700.00'. There are also buttons for 'Print', 'Search', 'Add', 'Edit', 'Delete', 'Cancel', and 'Exit'.

Figure 23-1 Quotation Entry

Rate It is the exchange rate between the selected currency and local currency. To change it just by input the new rate directly. To change the exchange rate permanently, please go to Currency File.

Ref No It is for user to input supplementary information, e.g. purchase order number.

Warehouse (Enhanced Edition only) The warehouse selected here will be used for out stock when sales invoices issued. It can be blank.

Sold by It is to record the salesman responsible to this Quotation.

Payment Terms It is the credit days for the customer. Please refer to Payment Terms File and Customer File.

Payment Method It is to record customer's payment method.

Job Code (Enhanced Edition only) The job code assigned to this transaction. It can be blank.

Ship Via To record the delivery method for the goods.

23.1.2 Details

Each quotation can contain many items including service items or remarks input by the user. It includes Item, Stock Code, Description, Quantity, Unit Price, Discount, and Amount.

Item	It is to input the number for each item or other information.
Stock Code	User can input the code directly or press the button beside the field to select the desired one from the existing records.
Description	Stock name is automatically filled in when Stock Code has been selected. User can modify stock name directly. However, the modified stock name is just for this record. For non-stock item input, user can input the name in here.
Quantity	The interface for input quantity will automatically displayed when the cursor moved to this field. Both large unit quantity and small unit quantity will be displayed in Quantity field if the stock has large unit and small unit. Otherwise, only small unit quantity field will be displayed for user input. The unit for large unit or small unit can be altered here. Small unit price will be filled in the field of unit price if only small unit quantity input. Otherwise, large unit price will be filled.
Unit Price	The Application will check whether the stock has been sold. If yes, last selling price and standard unit price will be displayed. You just choose the desired one. Whatever you chose, this price will be the last selling price for next sales.
Discount	This discount is defaulted as percentage. Thus, please just input the digit.
Amount	This amount is automatically calculated by the Application. User cannot amend. It equals to Quantity times Unit Price minus Discount.
Item Remark	Press [F5] in Detail section of a quotation to call an interface to input detail information for a stock or an item. The information includes Stock Unit Cost Price, and detail remark. The information can't be edited under [Browse] mode. The authority to browse or edit Stock Unit Cost Price can be set in [User Security Maintenance].
Delete an item	Press [Ctrl-Del] to delete an item at cursor position.

23.1.3 Footer

Footer includes Tax 1 & 2, Total Discount 1 & 2, Freight Charge, Other Charge and Balance.

Tax 1 & 2	Sales tax is automatically calculated by the Application based on default formula set by user. Please refer to Tax File.
Total Disc 1	This discount is calculated based on quotation total amount. User can just input the percentage or discount amount in relative field. These two fields are co-related. When the percentage input, discount amount will be automatically calculated. Vice Versa.
Total Disc 2	This discount is calculated based on quotation total amount exclusive total discount 1.
Freight Charge	The freight charge related to this transaction. Total discount 1 & 2 are exclusive this amount.
Other Charge	All other charges about this transaction. Total discount 1 & 2 are exclusive this amount.
Balance	It is automatically calculated. It equals to quotation total amount plus freight charge and other charge minus total discount 1 & 2.

23.2 Delivery Information

Ship To	Press the button beside the field by the mouse to call dialog box for searching via customer code, customer name or telephone number.
Delivery Date	The date to deliver the goods. To input directly or use the mouse to double click the button with triangle in this field to call a calendar to choose a desired date.

23.3 Remark

Remark	User can input detail description for each Quotation.
Revision	The times of this record modified. "0" will be marked for this record saved in first time. The Application will automatically add "1" for each modification.
Modified Date	The Application will automatically update the latest modified time of this record.
Modified By	The Application will automatically update the latest modified user name of this record.

23.4 Other Functions

- Print** Under Browse mode, press the right key of the mouse to call functions menu. The first function is to print quotation. User can press [F10] to call dialog box for printing or preview.
- Modify Format** Press [F8] or right key of the mouse on Print Dialog Box to call Report Designer. User should select the desired format before Report Designer executed.
- Search records by incremental searching method**
To search a record, press the button beside the field of Quotation No., or press the right key of the mouse to call functions menu to select [Search Quotation]. The fields for searching include Quotation No., Customer Code and Reference No.
- Search records by advance searching method**
Press [Search] button or [F4] to call an interface of [Search Quotation] for advance searching method. Most of the fields in quotation can be selected for advance searching.
- Copy** User can copy the content of the existing Quotation to a new Quotation by pressing right key of the mouse to call functions menu for copying.
- Decimal Point for unit price or quantity**
User can set decimal point, maximum to 4 points for unit price or 5 points for quantity in System Setup.
- Select the stocks from sales history**
User can select the stocks from sales history. Please refer to the steps:
i) Press [Add] to create a new quotation
ii) Select a designated customer
iii) Press [F7] to call [Stock Last Unit Price] file of this designated customer
iv) Press [Shift] to select multiple contiguous records with the mouse or press [Ctrl] to select multiple records one by one with the mouse.
v) Press [OK], the selected stocks will be added to the current transaction by selecting order. The default quantity is 1.

Chapter 24 Sales Order Entry (GOS)

Under main menu, use the mouse to choose Sales Order Entry or press [Alt-S]+O to Sales Order Entry interface. The interface divides into three pages: Main, Delivery Information and Remark.

24.1 Main

Main page includes three parts: header, details and footer.

24.1.1 Header

Header includes major content of a Sales Order. Most of the contents can be selected from the existing files. If no suitable record can be selected or to input a new record, user can call the interface of maintenance files to add a new record by pressing [F6] on the appropriate fields, such as Customer Code, Currency or Sold By, etc. To close the interface just by pressing Exit and the current record will be copied to Sales Order.

Field description:

S. O. No.	Sales Order number contains 20 digits or characters and is automatically incremental. The Application will firstly read the digit part of Sales Order Number in [System Number] to check whether the number was used. If not, this number will be used as a Sales Order Number. Otherwise, the Application will add one to this number.

Chapter 26 Sales Memo Entry (GRS)

Under main menu, use the mouse to choose Sales Memo Entry or press [F2] to Sales Memo Entry interface. The interface divides into three parts: Header, Detail and Footer.

26.1 Header

Header includes basic information of a Sales Memo. Most of the contents can be selected from the existing files under Maintenance.

Field description:

Invoice No. Invoice No. contains 20 digits or characters and is automatically incremental.

Note: Voucher Number should be unique to other Transaction Number. To change Voucher Number for next voucher, you should go to Transaction Numbers File in File Maintenance.

Date/Time This field is the date to issue a sales memo and will be automatically filled in as current date. The format is according to the date format of MS Windows. To change the format, please go to Control panel of MS Windows.

Figure 26-1 Sales Memo Entry

Shift This shift is selected by user before entered into this interface.

Void There will be a ‘✓’ in this field when a Sales Memo is deleted. Stock

quantities will be increased and sales transactions will be deleted when a Sales Memo is deleted. For security reason, deleted Sales Memo still keeps in the System for supervisor's checking.

Currency	Default currency is local currency. To change the currency, please press [F3] to choose the desired one.
Salesman	To record the salesman responsible to this memo. To change the salesman, please press [F6] to choose the desired one.
Cashier	The user who login in the System.
Member	Press [Alt-F6] to call dialog box for searching via member code, member's Chinese/English name, I.D. No., or telephone number.
Member Name	Member name is automatically filled in when Member Code has been selected. To modify, please go to Member File under Maintenance.
Store (Enhanced Edition only)	The code for this store. To modify, please go to System Setup under Maintenance.
Revision	The times of this record modified. "0" will be marked for this record saved in first time. The Application will automatically add "1" for each modification.
Modified Date	The Application will automatically update the latest modified time of this record.
Modified By	The Application will automatically update the latest modified user name of this record.

26.2 Details

Each memo can contain many items. It includes: Stock Code, Stock Name/Description, Quantity, Unit, Unit Price, Discount, and Amount.

Stock Code	The stock code in here will be automatically filled in when a stock code is input directly or read by bar code reader to the first field in the left side of the bottom line.
Description	Stock name is automatically filled in when Stock Code has been selected.
Quantity	The quantity in here will be automatically filled in when the quantity is input directly to the second field in the left side of the bottom line.

Unit	The unit for a stock.
Unit Price	The selling price for a stock.
Discount	Default discount for each stock. This discount is automatically filled in, referring to Stock Promotion Price or quantity discount.
Amount	This amount is automatically calculated by the System. It equals to Quantity times Unit Price minus Discount.
Item Remark	To input the supplementary information for a stock item, e.g. serial number, etc. This data field can be used for searching in Advance Search.

26.3 Footer

Footer includes all payment information, some function buttons and financial figures.

Payment information

All payment information in different payment methods about this Sales Memo will be displayed here.

Paid by	To record all payment methods for this sales memo.
Cur.	Currency code for different payment methods.
Payment	The paid amount for different payment methods.

Other financial figures

Total Amount	This amount is also automatically calculated by the System. It accumulates all items amount.
Total Disc	This discount is calculated based on sales memo total amount. User can just input the percentage or discount amount in relative field. These two fields are co-related. When the percentage input, discount amount will be automatically calculated. Vice Versa.
Total Tax	Total tax is automatically calculated by the System and based on default formula set by user. Please refer to the chapter of Tax File.
Net Amount	This amount is also automatically calculated by the System. It equals to Total Amount minus Total Discount plus Total Tax (China VAT exclusive).

Paid	It is to record the amount paid by customer.
Balance	It is automatically calculated. It equals to Net Amount minus Paid Amount.
Change	Changed amount for cash payment.
Total Quantity	The total quantities of all stock items for the whole cash memo.

26.4 Function Keys

ESC	To cancel or exit from Sales Memo Entry
F2	To add or save a sales memo or a cash payment (display interface for cash payment)
F3	To browse or edit a sales memo
F4	To browse or delete a sales memo
F5	To select a sales memo under Browse Mode
F6	To browse or change the salesman
F8	To modify the format of sales memo
F9	To preview a sales memo
F10	To print a sales memo
F11	To modify total discount amount
F12	To modify the quantity of a stock
Alt-F2	To show total amount in customer display
Atl-F3	Under insert/edit mode, to focus on the field of stock code
Atl-F4	To exit from Sales Memo Entry under browse mode
Alt-F5	To browse and select an existing record of the stocks
Alt-F7	Paid 10 dollars
Alt-F8	Paid 50 dollars

Alt-F9	Paid 100 dollars
Alt-F10	Paid 500 dollars
Alt-F11	Paid 1000 dollars
Alt-F12	To delete all input payments
Ctrl-F2	To save a sales memo with balance amount
Ctrl-F3	To change the currency
Ctrl-F11	To modify total discount rate
Ctrl-F12	To focus on Multi Payment Grid. User can use [Delete] to delete the record at cursor position
Alt-0	Paid by CARTE BLANCHE
Alt-1	Paid by EPS
Alt-2	Paid by Visa Card
Alt-3	Paid by Master Card
Alt-4	Paid by America Express
Alt-5	Paid by Diners Card
Alt-6	Paid by OCTOPUS
Alt-7	Paid by Coupon
Alt-8	Paid by DISCOVER
Alt-9	Paid by JCB
Ctrl-1	Paid by Hong Kong Dollars (HKD)
Ctrl-2	Paid by US Dollar (USD)
Ctrl-3	Paid by Japanese Yen (JPY)
Ctrl-4	Paid by Canadian Dollar (CAD)
Ctrl-5	Paid by Euro (EUR)

Ctrl-6	Paid by Taiwan New Dollar (TWD)
Ctrl-7	Paid by Singapore Dollar (SGD)
Ctrl-8	Paid by Australian Dollar (AUD)
Ctrl-9	Paid by Korean Won (KRW)
Ctrl-0	Paid by Thai Baht (THB)

26.5 Operation Procedures

Sales Memo

(1) When the stock code is input directly or read by Bar Code Reader, a new sales memo will be created. If quantities for each stock are too much, user can input the quantities by pressing F12.

(2) After the stock has been selected,

(i) User can input total discount by pressing [F11] to modify discount amount or [Ctrl-F11] to modify discount rate.

(ii) If no total discount to be input, please go to step (3).

(3) Payment

(i) Cash Payment

User can press F2 to input the amount paid by cash or press function key to input a special amount directly: [Alt-F8] for 50 dollars, [Alt-F9] for 100 dollars, [Alt-F10] for 500 dollars, [Alt-F11] for 1000 dollars.

(ii) Credit Card Payment

User can select different type of credit card by function key.

(4) When a sales memo has been finished, please press F2 to save.

Sales Return

(1) Press F12 to input the quantity returned by the customer. Negative sign must be input.

(2) Input stock code directly or read by Bar Code Reader.

(3) After the stock has been selected,

(i) User can input total discount by pressing [F11] to modify discount amount or [Ctrl-F11] to modify discount rate.

(ii) If no total discount to be input, please go to step (3).

(4)Payment

User can press F2 to input the amount paid by cash or press function key to input a special amount directly: [Alt-F8] for 50 dollars, [Alt-F9] for 100 dollars, [Alt-F10] for 500 dollars, [Alt-F11] for 1000 dollars.

(5)When a sales memo has been finished, please press F2 to save.

Note: To modify other fields, such as currency and salesman, etc please refer to section [Function Keys].

Chapter 27 Sales Memo Payment Voucher (GRS)

Under main menu, use the mouse to choose Sales Memo Payment Voucher or press [F3] to Sales Memo Payment Entry interface. Sales Memo Payment Voucher is designed for inputting sales memo payment. It doesn't involve accounting knowledge. The interface is friendly and simple.

27.1 Header

Journal No	Journal number is up to 20 characters. It must be unique.
Date	It is to record the date of transaction and will be automatically filled in as current date. The format is according to the date format of MS Windows. To change the format, please go to Control panel of MS Windows.
Cashier	The user who login in the System.
Shift	This shift is selected by user before entered into this interface.
Store	The code for this store. To modify, please go to System Setup under Maintenance.
Sales Memo No	All unpaid sales memo will be displayed in here. Please choose one to make payment.
Invoice Date	The date of the selected sales memo.
Currency	The currency of the selected sales memo.
Total Amount	This amount is total amount of the selected sales memo.
Total Discount	This amount is total discount of the selected sales memo.
Paid	All paid amounts include deposits.
Balance	It equals to Total Amount minus Total Discount and Paid Amount.

27.2 Contents

Currency	The default value is the currency of the selected sales memo. If the currency changed, the exchange rate will be changed respectively.
Rate	It is the exchange rate between the selected currency and local currency. To change it just by input the new rate directly. To change

the exchange rate permanently, please go to Currency File.

Figure 27-1 Sales Memo Payment Entry

Payment Amount The total payment amount for this Sales Memo Payment Entry.

Payment Information

All payment information in different payment methods will be displayed here.

Paid by To record all payment methods for this sales memo.

Cur. Currency code for different payment methods.

Payment The paid amount for different payment methods.

Revision The times of this record modified. "0" will be marked for this record saved in first time. The Application will automatically add "1" for each modification.

Modified Date The Application will automatically update the latest modified time of this record.

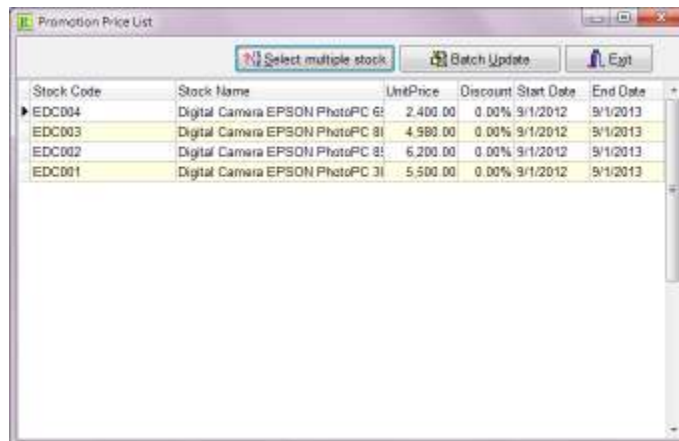

Modified By The Application will automatically update the latest modified user name of this record.

Chapter 28 Stock Promotion Price Entry (GRS)

User can input the promotion price for a series of stocks for a specific period here.

Field description:

- Stock Code** User can input the code directly or press the button beside the field to select the existing records.
- Stock Name** Stock name is automatically filled in when Stock Code has been selected.
- Quantity** The quantity in here will be automatically filled in when the quantity is input directly to the second field in the left side of the bottom line.
- Unit Price** The selling price for a stock. The unit price is automatically filled in when Stock Code has been selected. To amend, please input directly here.
- Discount** Please input the discount rate directly.
- Start Date** The beginning date for the promotion period.
- End Date** The ending date for the promotion period.

The screenshot shows a software window titled 'Promotion Price List'. At the top, there are three buttons: 'Select multiple stock', 'Batch Update', and 'Exit'. Below the buttons is a table with the following columns: Stock Code, Stock Name, Unit Price, Discount, Start Date, and End Date. The table contains four rows of data, all for 'Digital Camera EPSON PhotoPC 81'.

Stock Code	Stock Name	Unit Price	Discount	Start Date	End Date
EDC004	Digital Camera EPSON PhotoPC 81	2,400.00	0.00%	9/1/2012	9/1/2013
EDC003	Digital Camera EPSON PhotoPC 81	4,980.00	0.00%	9/1/2012	9/1/2013
EDC002	Digital Camera EPSON PhotoPC 81	6,200.00	0.00%	9/1/2012	9/1/2013
EDC001	Digital Camera EPSON PhotoPC 81	5,500.00	0.00%	9/1/2012	9/1/2013

Figure 28-1 Stock Promotion Price Entry

Chapter 29 Stock Selling Price by Shop (GRS) (Enhanced Edition only)

User can input stocks' unit price for a specific period to each shop here.

Field description:

Stock Code User can input the code directly or press the button beside the field to select the existing records.

Stock Name Stock name is automatically filled in when Stock Code has been selected.

Unit Price The selling price for a stock. The unit price is automatically filled in when Stock Code has been selected. To amend, please input directly here.

Start Date The beginning date for the promotion period.

End Date The ending date for the promotion period.

Figure 29-1 Stock Selling Price by Shop

Select multiple stocks To facilitate the selection, user can select a range of stocks here.

Batch Update To update the stocks' unit price by batch.

Chapter 30 Utilities

30.1 Backup Data

There are two backup methods, On-Line Backup and Off-Line Backup, for Firebird / Interbase SQL server.

On-Line Backup is executed by the authorized person who should log in the database system and backup the data to backup file by API commands of Firebird/Interbase. The size of the backup file by this method will be much small.

Off-Line Backup is to backup the database file (e.g. GBSI.FDB) to other device. All GTC Applications must be log out and Firebird/Interbase server must be stopped before Off-Line Backup be executed. Do not use external proprietary backup utilities or file-copying tools such as WinZip, tar, copy, xcopy, etc., on a database which is running. Not only will the backup be unreliable, but the disk level blocking used by these tools can corrupt a running database.

On-Line Backup is used in GTC Applications. Actually, there are many methods to backup the database. Here only the method used by GTC Applications will be introduced. To learn more about different backup methods, please refer to the user manual of Firebird/Interbase.

On-Line Backup can be executed provided that:

- a) The backup function can be only executed on the computer with both GTC Applications and Firebird/Interbase server installed.
- b) This function will be executed only without anyone executed the Application simultaneously.

After [Backup] function is chosen, figure 23-1 will be displayed. User should choose target drive and sub directory and press [Start Backup] button to start. If there is a lot of data to backup, more than one diskette will be requested. Please put the backup data diskettes at safe place with right label.

Start Press [Start] to start. Before backup data, the disk should be formatted.
Note: all files in the diskette will be overwritten.

Exit To exit Backup Screen.

To use this function, please note:

1. Only the drive and the directory supported by your MS Windows can be chosen. If you can not choose the desired drive or directory, please check the settings of MS Windows.
2. If target drive is CD-RW, you should have an appropriate application so that CD-RW can be written directly. For example, Direct-CD of EasyCD Creator or In-CD of Nero.

3. You should insert the disk before the drive chose.
4. If target drive is hard disk, please select one hard disk other than the exiting one. Otherwise, if there is any damage on the existing hard disk, the data and the backup data will be lost simultaneously.
5. The file name of backup data is gbs5data.zip.

Figure 30-1 Backup Data

Note: Before backup data, the Application will automatically check whether another user executed the Application (including other modules). This function will be executed only without anyone executed the Application simultaneously. Moreover, it is better to backup more than one copy.

30.2 Restore Data

This function is used to restore the backup data to hard disk. Please choose source drive or directory. Press [Start Restore] button to restore data. The Application will automatically search the backup file, gbs4data.zip, from the designated drive and directory. If backup diskettes are more than one, please insert the diskettes by order.

The Application will automatically check whether anyone executed the Application (including other modules) before Restore Data function is executed. Otherwise, the function will not be executed.

Note: This function will overwrite the data in target directory. Please be careful. If Restore procedure is stopped by force, the data in hard disk may be damaged.

Figure 30-2 Restore Data

30.3 Adjust Closing Stock Value

Physical Inventory method is used in GTC Accounting System. User must count the actual quantities of all stocks on hand at the end of each financial period. The closing stock value equals these quantities times unit price of all stocks. Please input this value in the window of [Adjust Closing Stock Value]. This value will be used to calculate the profit/loss for each financial period.

Figure 30-3 Adjust Closing Stock Value

30.4 Opening Balance

30.4.1 Chart of Accounts Opening Balance

Opening balance for accounts can be input here or in [Chart of Account File]. Here all detail accounts of Balance Sheet will be displayed.

Note: 1) The total amount of debit side must equal to the total amount of credit side. Otherwise, it can't be saved.
2) The accounts for Opening Stock and Closing Stock must be set up firstly.

30.4.2 Customer Opening Balance

To facilitate the process, user can input the opening outstanding invoices for different customers here other than in [Customer File].

30.4.3 Vendor Opening Balance

To facilitate the process, user can input the opening outstanding invoices for different vendors here other than in [Vendor File].

30.5 Year End

It is for bringing forward the balance to next financial year and to delete all transactions related the accounting.

Steps:

1. To create a **new** company data (e.g. CO2011) for a new financial year.
2. In old company data (e.g. CO2012)
 - Execute [Transaction Audit] (Utilities > Transaction Audit)
 - Verify all financial reports
 - Backup Data (Utilities > Backup Data)
3. Execute [Restore Data] in the new company data (e.g. CO2011)
4. Execute [Year End] in the new company data (e.g. CO2011)
 - Verify all financial reports

Note: All transaction files, including Invoices and Vouchers, will be deleted after Year End executed. Please make sure you have at least one copy of data.

If there are any adjustments for previous year after Year End executed, you can adjust the transactions directly in old company data (e.g. CO2011). For the new company data, you can just input the correct opening balance to the relative accounts in Chart of Accounts File. If the adjustment involved A/R and A/P accounts, please also adjust the opening balance for the relevant customers and vendors.

30.6 Database Tools

30.6.1 Empty all transaction files

This function is to delete all transaction files, such as Sales Invoice, Vendor Invoice, Delivery Note, AR Payment, AP Payment and Stock Adjustment, etc. However, all files under Maintenance will be reserved.

30.6.2 Clear all data

This function will clear all data, including all transactions and all files under Maintenance. When this function finished, the database will be empty.

30.6.3 Delete Customer Opening Balance

This function will delete all customers' opening balance invoices and set the opening balance amount to zero. The invoices issued in current financial year will not be affected. This function can't be reverted. Please use this function carefully.

30.6.4 Delete Vendor Opening Balance

This function will delete all vendors' opening balance invoices and set the opening balance amount to zero. The invoices issued in current financial year will not be affected. This function can't be reverted. Please use this function carefully.

30.6.5 Delete Stock Opening

This function will delete all stocks' opening quantity. The records in current financial year will not be affected. This function can't be reverted. Please use this function carefully.

30.6.6 Change Chart of Account Code

To change the existing code to a new one, just by selecting the old code, inputting the new code and press [Run]. All transactions related to the old one will be changed to the new one automatically. This function will be rejected if the new code existing in [Chart of Account File].

30.6.7 Change Customer Code

To change the existing code to a new one, just by selecting the old code, inputting the new code and press [Run]. All transactions related to the old one will be changed to the new one automatically. This function will be rejected if the new code existing in [Customer File].

30.6.8 Change Vendor Code

To change the existing code to a new one, just by selecting the old code, inputting the new code and press [Run]. All transactions related to the old one will be changed to the new one automatically. This function will be rejected if the new code existing in [Vendor File].

30.6.9 Change Stock Code

To change the existing code to a new one, just by selecting the old code, inputting the new code and press [Run]. All transactions related to the old one will be changed to the new one automatically. This function will be rejected if the new code existing in [Stock File].

30.7 Transaction Auditor

When there is the difference from the actual value due to hardware problem, etc. Transaction Auditor can be executed to recalculate the balance of different transactions.

Figure 30-4 Transaction Auditor

Note: All transactions will be re-saved when [Rebuild Transactions] be executed. It takes time. Thus, it is better to execute this function on the computer with both GTC Applications and Firebird/Interbase server installed.

30.8 Import Data from Other Company / Location

This function is to consolidate the data from different companies /locations. For example, your company has 5 branches in 5 different locations. Each branch has own data. At the end of the month, each branch can send its data to head office via e-mail.

The consolidation will be handled in head office. You can set up 5 sets of accounts for 5 branches and 1 set of account for head office. Firstly, you should restore the data from branches to the account of each branch. And then, you can execute Import Data function to import data from the account of each branch to the account of head office. Now, this account of head office contains a whole set of accounting information of your company.

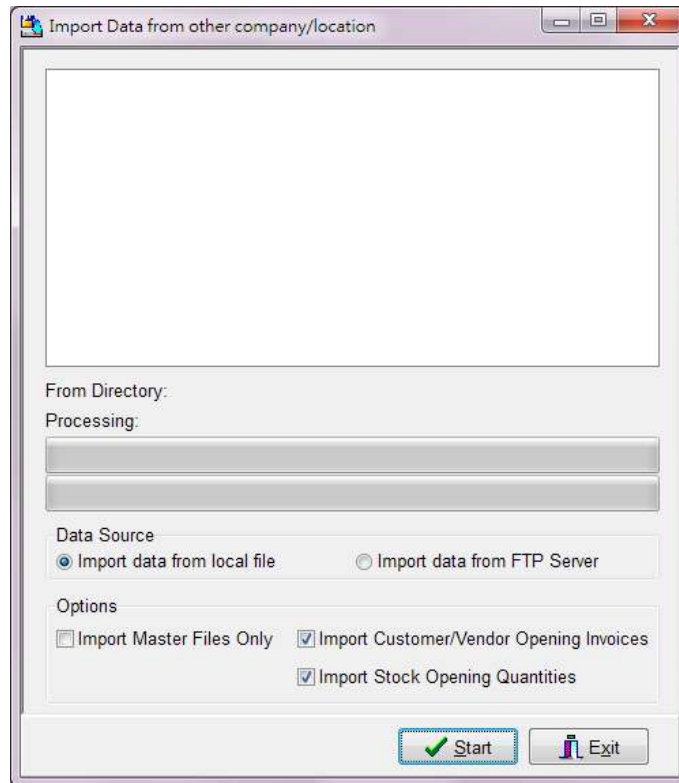

Figure 30-5 Import Data from other Company/Location

To have precise and consistent data, all Applications must fulfill the following conditions:

1. The date and time should be same for all computers. The Application will update or append the records according to the modified date and modified time of data.
2. Each branch must use different transaction numbers. The Application will overwrite the records by the new one if the transaction number is same.
3. For security issue, the transactions cannot be deleted automatically by the Application once Import Data function has been executed. Branch should inform head office to delete the transaction by manual if there is any transaction was deleted by branch.

30.9 Import Data from Other Format File

This function allows the data in other formats can be imported into GTC Applications' database. Supported formats include Paradox File, dBase File, Text File, HTML File, MS Excel File, MS Word File, Lotus 1-2-3 File, QuattroPro File, XML File, MS Access Database File and ADO File. The data can be imported only including the master data files, such as Chart of Accounts, Customer File, Vendor File, Stock File, etc. All transaction files, such as invoices and vouchers, cannot be imported.

Note 1: If the data is read from MS Access and ADO, MS Access and ADO database engine or compiler must be installed firstly.

No database engine or compiler must be installed if the data read from other formats, such as MS Excel.

Note 2: User should have certain knowledge of database structure and source database formats.

Figure 30-6 Import Data from Other Format File

30.9.1 Select Target File

The first step to import data from other format file is to select the target file. The target file is one of the files under Maintenance. For example, Chart of Accounts, Customer File, Vendor File, Stock File, etc.

Secondly, please select the source file. And then, press [Start] to begin the import procedures.

30.9.2 Mappings

The contents of the source file will be displayed when all settings and information are selected and filled in appropriately. If the settings and information are inappropriately

selected and filled in, the contents will be incorrectly shown here. To amend, please press [Back] to correct. Otherwise, please set field mappings to specify the correspondence between fields in the source and destination files.

- Destination** The field names of the file in GTC Applications.
- Source** The field names of the source file.
- Key icon** It is the primary index when there is a '✓' in this field.
Note: It is highly recommended no any change here.
- Specifications** To save all settings of this import or load the previous settings from the existing records.

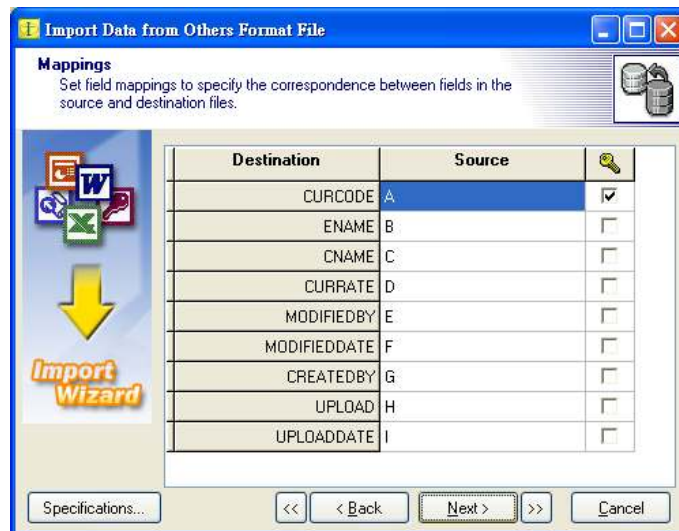

Figure 30-7 Import Data - Mappings

The mappings can be done for individual fields. The other fields, not to be imported, can be blank. Please [Next] for Data preview. The result of field mappings will be shown here. To filter the data of source file, please select [Load when] or [Skip if] and set the appropriate criteria.

Note: The field type should be consistent and convertible. For example, a string field should not import to a numeric field.

30.9.3 Import

All necessary information needs to import the data has been already gathered. Please click [Execute] to begin the import process after Import Mode has been selected.

Append	Add records to the destination table.
Update	Update the record in destination with matching record from source.
Append/Update	If the record exists in destination, update it. Otherwise, add it.
Copy	Delete all records in destination, repopulate from the source.

The statistic information of imported records will be shown after the import process finished.

Figure 30-8 Import Data – Import Mode

30.10 Import Transfer Voucher from Excel File

GTC Accounting System supports to import vouchers from Excel File.

Item No.	Order No created by GTC. Not need in Excel File.
Voucher No.	This number, up to 20 digits or characters, will be assigned as the voucher number and must be existed in each row. When the number changed, a new voucher will be created.
Voucher Date	The date of the voucher, it should be in date format in Excel File. The date of last row will be applied for the date of a voucher if the voucher with same voucher number but different voucher date.
Ref No	Supplementary information for a voucher. This field contains up to 20

digits or characters.

Account Code	The account to record each transaction and up to 20 digits or characters. All accounts in Excel File must be existed in [Chart of Account File]. Otherwise, all transactions of the voucher will be rejected to import.
Job Code (Enhanced Edition only)	If the job code existed, this transaction will be assigned to the relative Job Reports according to the related account type of the account.
Cheque No	Cheque number for each transaction and up to 30 digits or characters.
Currency Code	The currency code for each transaction and up to 4 digits or characters. All currency code must be existed in [Currency File]. Otherwise, all transactions of the voucher will be rejected to import.
Currency Rate	Any number greater than “0”. If local currency be used, the rate must equal to “1”.
Debit Amount	The amount for debit side. It must be greater than “0”.
Credit Amount	The amount for debit side. It must be greater than “0”. Note: the total amount of debit side must equal to the total amount of credit side for each voucher.
Invoice No.	Invoice No must be provided if the transaction involved the accounts of AR or AP.
Invoice Date	The date of the invoice. It must be same as the voucher date.
Due Date	The due date of the invoice.
Customer / Vendor Code	The customer or vendor for recording the invoice, up to 20 digits or characters. All customer or vendor code must be existed in [Customer File] or [Vendor File].
Invoice Amount	Total amount of an invoice must greater than “0”.
Remark 1 & 2	It is detail supplementary information for each transaction, up to 60 digits or characters.

30.11 Export Data to Other Company / Location

This function is to minimize the data traffic between head office and branches. To execute the function, date range and target directory should be given. Only the data in

the range of date will be exported. Default target directory is sub-directory of data directory. For example, if the data directory is c:\gtc\gbs50p\data (Professional Edition) or c:\gtc\gbs50i\data (Enhanced Edition) and the current date is 3, the default target directory will be c:\gtc\gbs50p\data\3 (Professional Edition) or c:\gtc\gbs50i\data\3 (Enhanced Edition).

If the directory is usually to be used, please set the directory in Default Directory of System Setup.

To change the target directory, user can just input directly in [Default directory] or press the button beside the field to choose the desired one.

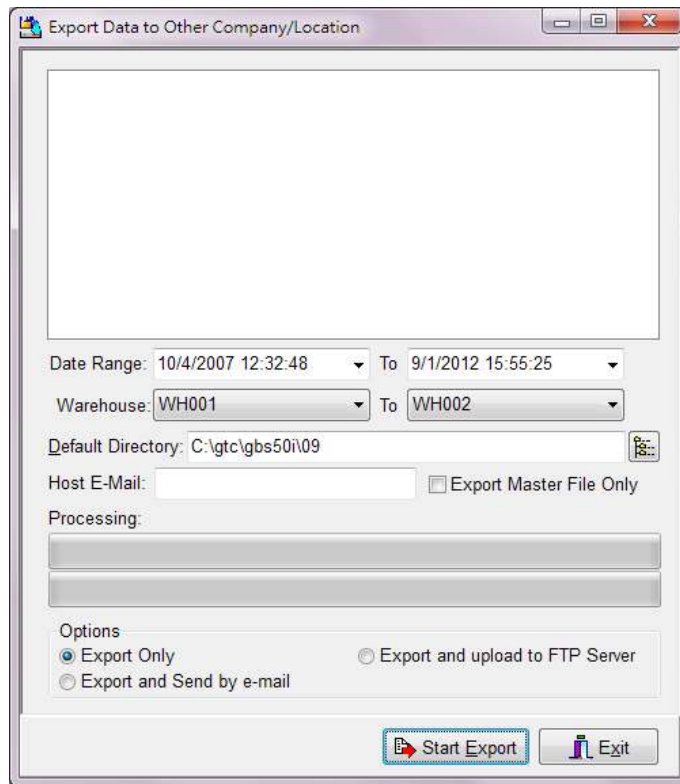

Figure 30-9 Export Data to Other Company/Location

30.12 Export Data to Other Format File

GTC Application has a powerful function, Export Data to Other Format File, for user to export the data to many general formats, such as Text File, HTML File, MS Excel File, MS Word File, Symbolic Link File, DIF File, Lotus 1-2-3 File, QuattroPro File, SQL File, XML File, MS Access Database File, Rich Text File, SPSS File, PDF File and

LDAP File. By doing that, the data in GTC Applications can be read by other applications.

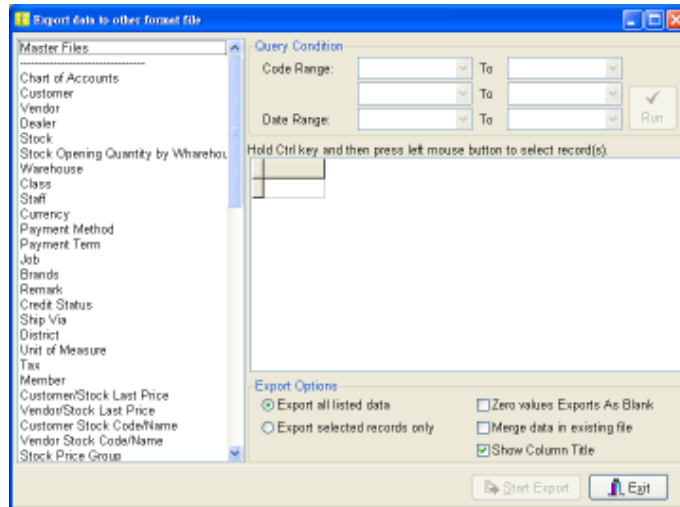

Figure 30-10 Export data to other format file

30.12.1 File Name

The files, including Master Files and Transaction Files, are displayed on the left hand side of the window. Please select one of these files by using mouse to export. All detail contents of the selected file will be displayed on the right hand side of the window, Content Area. GTC Applications allow the user to export designated records. Please refer to [Query Condition].

30.12.2 Query Condition

After the file has been selected, the criteria for selecting the records to be exported will be displayed. The criteria can be customer code, stock code, date range or transaction numbers, etc. Please choose the appropriate range and press [Run]. The result will be shown in Content Area.

30.12.3 Export Options

Export all listed data

All records shown in Content Area will be exported. To select designated records to be exported, please refer to [Query Condition].

Export selected records only

User can select designated records in Content Area by pressing [Ctrl] button and using mouse to select the desired records simultaneously.

Zero values Exports as blank	If this field be selected, the zero value of the records will be interpreted as blank when the records are exported.
Merge data to existing file	If this field be selected and there is a same file name existed, the new records will be merged into the existing file. Otherwise, the existing file will only contain the new records.
Show Column Title	Please mark '✓' here if you want to show column titles in the first line of the records.

30.12.4 Start Export

The export function will be executed once you press [Start Export]. During the process, there are a series of questions will be displayed. Please answer the questions according to your options.

Chapter 31 How to install Firebird

There are two Firebird installation kit included in the CD-ROM of GTC applications: one for Windows platform and one for Linux platform. You can obtain Firebird installation kit for other operating system from <http://www.firebirdSQL.org>.

31.1 Firebird's system requirements

31.1.1 RAM

Firebird's Superserver utilizes around 2MB RAM. Each connection to the Superserver adds approximately 115K RAM. The Superserver shares a single cache among all connections and increases cache automatically when required.

On POSIX, the Classic server uses no RAM until a client connection is made. On Windows, a small utility service is listening for connection requests. Each connection to the Classic server uses about 2MB. The Classic server creates an individual cache per connection.

As an estimate, allow 64MB of available RAM for a server and 16MB for a local client. The more clients you add, the more RAM will be used. Resource usage on the Classic server grows by a fixed amount per client attachment; on Superserver, resources are shared and will grow dynamically as needed.

31.1.2 Disk Space

Firebird Server requires disk space ranging from 9MB-12MB, depending on platform and architecture.

Firebird's client library requires 350KB disk space.

Firebird's DB administration utility requires 2-6MB disk space, depending on the utility selected.

31.1.3 Computer hardware requirement

Minimum specifications depend on how you plan to use the system. You can run a server and develop database schemas on a Pentium CPU with 64MB RAM. But, such a configuration would not provide much capability if deployed into a network. Windows is more demanding on CPU and memory than a Linux server running at the console level.

31.1.4 Operating System requirements

The minimum operating system requirements for running Firebird server as follow:

- a) MS Windows XP 、 Vista 、 7 、 8 or 10
- b) MS Windows 2003 、 2008 or 2012: Database should be on partitions that have VSS

- (volume shadowing) feature disabled.
- c) Other OS: Refer to Firebird distribution kits for details.

31.2 Installation in MS Windows operating system

31.2.1 If Firebird/Interbase has been installed

Firebird's installer will try to detect if an existing version of Firebird or Interbase is installed and/or running. You must either STOP the current server and/or remove the currently installed version before continuing.

If the Firebird/Interbase server is running as a service, you can stop the service via 'Control Panel | Services'.

If you want to uninstall Firebird, you can run [uninstall Firebird] in Firebird group in MS Windows's Start menu.

31.2.2 Other Considerations

- a) Firebird Server - and any databases you create or connect to - must reside on a hard driver that is physically connected to host machine. You cannot locate components of the server, or and database, on a mapped drive, a filesystem share, or a network filesystem.
- b) To install Firebird under MS Windows, you have to log into the operating system as Administrator.
- c) If an existing, newer version of GDS32.DLL exists you will be prompted to overwrite it. It is recommended to answer YES if you are doing server install.
- d) After the Firebird server was installed, you need to install Firebird client libraries in all computers which have GTC applications installed. To install Firebird client libraries, you can run Firebird's installer, and select [Minimum client install – no server – no tools] to install.
- e) To make sure the operating system is most updated.

31.2.3 Installation Steps

To locate Firebird-x.x.x.xxxx-Win32.exe or Firebird-x.x.x.xxxx-x64.exe in the installation directory of GTC system, and double click to run it. Firebird installation kit name should contain a dot-separated string of numbers in the following order: version number, release number, sub-release number. For example, Firebird-2.5.5.26952_0_x64.exe:

- a) Firebird: Firebird installation kit
- b) 2.5.5: Version number, release number and sub-release number
- c) 26952_0: Build number
- d) Win32/x64: Operating system platform

If you see following message, you need to stop or remove the old version of Firebird/Interbase first, before continue to install.

Figure 31-1 Installer remind to stop Firebird server

If everything is ok, you can see the welcome screen:

Figure 31-2 Welcome Screen

License Agreement will be displayed when you click [Next>] to continue. Please press [Yes] if License Agreement is accepted. Otherwise, press [No] to exit the installation.

Information for installing Firebird will be displayed. Click [Next>] to continue the installation.

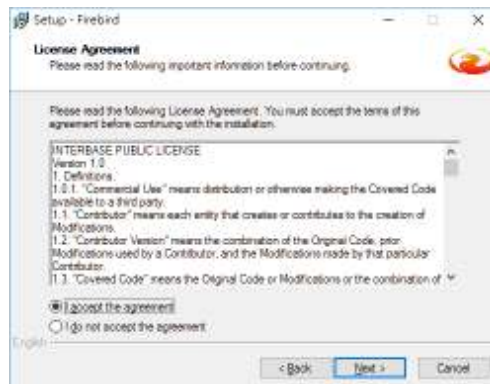

Figure 31-3 License Agreement screen

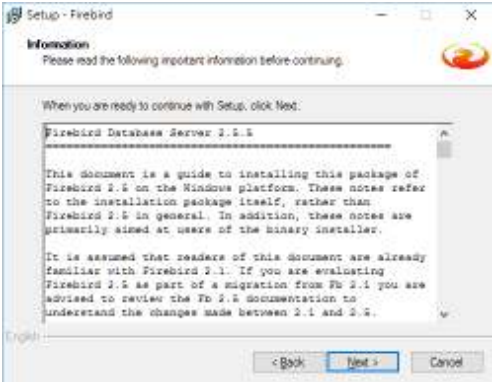

Figure 31-4 Information screen

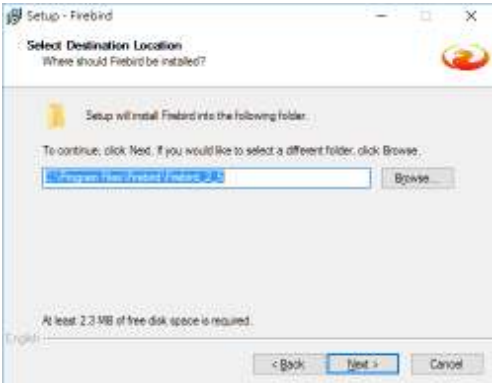

Figure 31-5 Select Destination Location

Click [Browse] button to select the destination location. Press [Next>] to install Firebird to the default location.

Figure 31-6 Select Components

Please select [Full installation of server and development tools] and [Super service binary] and [Next>] to continue.

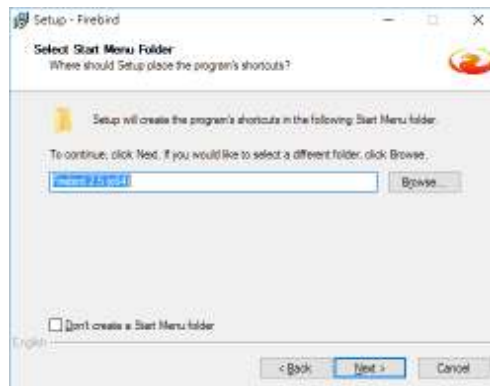

Figure 31-7 Select Start Menu Folder

Please press [Next>] to continue. Setup will create the program's shortcuts in [Firebird 2.5 (x64)] of Start Menu folder.

There are some additional tasks. Please refer to the followings:

Use the Guardian to control the server

The Guardian is a program that can be used to start the Firebird Superserver and watch over it in case it crashes. If the server program crashes, Guardian tries to restart it. It's recommended when running Firebird Superserver as an application in a "noisy" network, e.g. in Windows networks where clients are connecting using TCP/IP or Named Pipes and the network is also used for file and device sharing. If you set up the services to restart automatically, you don't need Guardian.

Run Firebird server as: Run as an Application or Run as a Service

Select [Run as an Application], Firebird server will run as an application after a MS Windows user logged into Windows.

Select [Run as a Service], Firebird server will run as a service. It will run at background after MS Windows is started.

Start Firebird automatically every you boot up?

Whether runs Firebird server at MS Windows is started.

Copy Firebird client library to <system> directory?

If you have one Firebird server in this machine, please check this option. The installer will copy Firebird client library into MS Windows System or System32 directory.

Generate Client library as GDS32.DLL for legacy application support?

The name of Firebird client library file is fbclient.dll. For compatible reason, you need check this option, installer will generate client library as gds31.dll.

Install Control Panel Applet?

This option will install Firebird Control Applet into MS Window's Control Panel. Firebird's Control Panel Applet has following's functions:

- Stop or start Server
- Showing Firebird' version number
- Change the Run option: [Run as a Service] or [Run as an Application]
- Change the Start option: [Automatically] or [Manually]

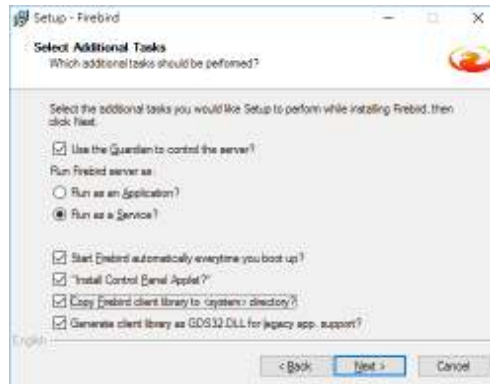

Figure 31-8 Select Additional Tasks

All settings will be displayed for your checking when [Next>] button be pressed.

Figure 31-9 Ready to install

Click [Install>] to continue with the installation, or click [<Back] if you want to review or change any settings. Setup will install Firebird Database on your computer. Process bar

will be shown during the installation. The following information about Firebird will be displayed.

Figure 31-10 Firebird's detail information

Finish screen will be shown when you click [Next>]. Finally, press [Finish] to finish the Setup.

31.3 Install Firebird server under Unix/Linux or other POSIX

Refer to Firebird Installation Guide for details.

31.4 Key points about Firebird/Interbase

31.4.1 Data Directory

After the Firebird/Interbase was installed, you need to decide the location to store data file. i.e.: c:\gtc\gbs50i\data. This location must reside on a hard driver that is physically connected to host machine. You cannot locate components of the Firebird server, or and database, on a mapped drive, a filesystem share, or a network filesystem.

On MS Windows platform, you have to assign the rights of read, write, modify of data directory to the user who running the service of Firebird server. You can run the Firebird server service under a designed user account (e.g.: firebird). The default practice – running the service as the LocalSystem user poses a security risk if your system is connected to the internet.

You do not need to allow user to browse the data directory. So that, user cannot copy or modify the database file directly.

31.4.2 Default user name and password of Firebird/Interbase

The default user name of Firebird/Interbase is SYSDBA, the password is masterkey (actually, masterke: characters after the eighth are ignored). In Firebird v.1.5 or newer version is installing on Linux, Firebird's installer will generate a random SYSBDA password and store that in /opt/firebird/SYSDBA.password. For security reason, you should change SYSDBA's password immediately using the gsec command-line utility. The method of changing the password as following:

Under MS Windows platform

- a) User is logged into the operating system as Administrator
- b) Click [Start] button in MS Windows, select [Run...] and input CMD to run Command Shell
- c) Use CD command to change current directory to Firebird/Interbase's bin directory, i.e.:
cd\Program Files\Firebird\bin
- d) Type the following on Windows, treating it as case-sensitive:
gsec -user sysdba -password masterkey
(remark: sysdba is default user; masterkey is default password of sysdba)
- e) You should now see the shell prompt for the gsec utility:
GSEC>
- f) Type this command:
modify sysdba -pw newpassw
(remark: newpassw is the new password)
- g) Press Enter. The new password *newpasw* is now encrypted and saved, and *masterkey* is no longer valid.
- h) Type [quit] and press [Enter] to quit the gsec shell
- i) Type [exit] and press [Enter] to MS Windows's command shell

Under Unix/Linux platform

- a) User is logged into the operating system as root
- b) Open Command Shell
- c) Use cddir command to change directory into Firebird's bin directory, i.e.:cddir
/opt/Firebird/bin
- d) Type this command:
gsec -user sysdba -password masterkey
(remark: sysdba is default user; masterkey is default password of sysdba)
- e) You should now see the shell prompt for the gsec utility:
GSEC>
- f) Type this command:
modify sysdba -pw newpassw
(remark: newpassw is the new password)
- g) Press Enter. The new password *newpasw* is now encrypted and saved, and *masterkey* is no longer valid.
- h) Type [quit] and press [Enter] to quit the gsec shell
- j) Quit from command shell

*Note: Firebird/Interbase ignores all characters in a password pass the eighth character, newpassw will works, as will newpassword.

The Firebird kit does not come with a GUI admin tool. There are excellent GUI tools available for use with a Windows or Linux client. For a list of the better-known admin tools for Firebird, visit <http://www.ibphoenix.com>.

If you changed password of SYSDBA or add a new user in Firebird, you have to fill the user and password information in GTC Multi-Company Controls System.

Note: Glorious Technology Co., Ltd. and its reseller have not responsibility to support Firebird/Interbase.

31.4.3 Firewall

The Firebird client might fail to connect the server if the database server is behind a software or hardware firewall that blocks port 3050. By default, a Firebird server listens on port 3050 for TCP/IP connection requests from clients. Its registered port service name is `gds_db`. You have to configure the firewall setting to allow communication at port 3050.

You can use a different port, a different port service name, or both. You might need to do this if port 3050 is required for another service. There are several ways to override the defaults. Both the server and the clients must be configured to override the port service name or number, or both. For detail information, you can refer to the user manual of Firebird.

Chapter 32 Appendix

32.1 How to enhance the performance of GTC Applications

The speed of CPU and the size of RAM is the most important factors to affect the performance of GTC Application. Normally, the faster speed of CPU can be, the higher performance of GTC Application can be. However, data communication is very frequent when GTC Application executed. Therefore, the performance of Hard disk is more important than the speed of CPU. At least 16MB RAM is required for GTC Application, exclusive the requirement of Operating System.

To improve the method of data communication, please refer to the followings:

1. Anti Virus applications

Anti Virus applications will automatically scan all files when GTC Application reads or writes the data each time. Therefore, the performance of GTC Application will be affected. Please close Anti Virus applications temporarily or exclude the database files (*.fdb) from scan lists.

2. The speed of Hard Disk

Normally, the faster speed of Hard Disk, the higher performance of GTC Application. Please choose a higher speed of Hard Disk to enhance the performance of GTC Application. Regular maintenance of Hard Disk is definitely important.

3. The speed of network

If the data is placed in server and will be shared in the network, the speed of network is an important factor to the performance of GTC Application. Please seek for advises from your System Administrator or network vendor. There are suggestions:

- a) Faster network card: using 10/100/1000MB network card
- b) Faster HUB: If possible, please choose switch that is better than HUB.
- c) Quality of network card and switch: Data communication relies on the quality of network card and switch. There may be communication errors or even damage on data caused from bad quality of network card and switch.
- d) Qualified network accessories: There is an international standard of different network. For example, Ethernet 1000MB network requires the network accessories with Cat. 5 or higher standard.

32.2 Notes to send reports by e-mail

32.2.1 The requirement for email software

GTC application uses default email software of Operating System to send reports by e-mail. In order to use the email feature, your email software must be MAPI compliant. For example, MS Outlook and MS Outlook Express are MAPI compliant. Please contact the vendor of your email software to obtain more information about MAPI

compliance. If you want to check your email software that is default email software of Operating System, please go to [Internet Options] in Control Panel.

32.2.2 Network cabling and email account

To send out an email, please set up network cabling and open an email account firstly. Otherwise, the email will be placed in [Out Box].

32.2.3 Not send out immediately

If the email cannot send out immediately, please check the following:

- a) Whether the network cabling is connected.
- b) Whether your email software can send and receive an email. Try to send an email to yourself. If you cannot receive the email, please check the setting of network cabling and your email account.
- c) For MS Outlook Express, please tick [Send Message Immediately] in [Tools]/[Options] / [Send]. For MS Outlook, please tick [Send Message Immediately] in [Tools]/ [Options] / [Send].

32.3 Questions and Answers

32.3.1 What is the default user ID and password?

The default user ID and password is SUPERVISOR and PASSWORD respectively.

32.3.2 Does GTC support to display and record different countries' characters simultaneously?

Yes. From version 5.0, GTC adopts Unicode (UTF8) standard. GTC supports all Unicode standard characters, e.g. Traditional Chinese, Simplified Chinese, Japanese, Thai, etc., provided that your MS Windows supports to display and input by Unicode characters.

GTC uses Arial as the default font. If some characters displayed by a square happened, it is just because Arial doesn't support this character. Please follow the below steps to change the form:

1. Open gbs5.ini under the installation folder of GTC.
2. Insert a new line under [Common]. Type "Font=" + the name of the form. For example:

```
[Common]
Font=Tahoma
```

If Font=Default is used, the default form of MS Windows will be applied. For MS Windows 7, the default form is Tahoma.

32.3.3 Why the word of '3' in traditional Chinese can't be displayed and printed or Hong Kong characters become question mark when Chinese characters input in GTC applications?

Please download and install Hong Kong Supplementary Character Set to solve the problem from: <http://www.microsoft.com/hk/hkscs/default.asp>

32.3.4 Why only part of the voucher or invoice (in the format of Computer Form) can be printed on the left side?

It is because your printer driver can't support custom paper size. Most default drivers of MS Windows doesn't support custom paper size. Please refer to the following solutions:

- a) The best solution is to ask your printer vendor for the driver supporting custom paper size.
- b) Change the paper size to the one your printer driver supported, such as A4.
- c) Create a new format. It is applicable to MS Windows 2000, XP, Vista and 7.
 - i) click **Control Panel -> Printers and Faxes**, select the printer by mouse
 - ii) In the printer windows, choose **File -> Server Properties** to create new paper size
 - iii) Set a form name, check the box for **Create a new form**, input paper size, click Save
 - iv) Click the OK button when finished
 - v) Select this new format in Report Designer

32.3.5 Why there is no response when the reports printed by multifunction printer?

It is because the driver of these multifunction printers don't support Letter Size paper. Please change Paper Size to A4 in General page of [System Setup].
